

- **Step 3 – Part D – Move Photo(s) location**
- **You follow the same process that I showed you in Part B - how to move the Duplicate Title.**
- **You left click and hold it down on a slide with a Photo and drag it to a different location.**
- **Next is a sample.**

- Here is a sample of moving the Second Title and the Photo slide to the end.
- This is the End of Step 3 – Part D.

The screenshot displays the WPS Presentation software interface. The main slide shows a photograph of a woman in a black t-shirt holding a grey bird. A large black rectangular box is overlaid on the top portion of the slide. The slide sorter on the left shows a sequence of slides, with slide 7 highlighted in red and labeled 'BERTIE'. Two blue arrows point from the 'BERTIE' slide thumbnail to the main slide area. The software's ribbon includes tabs for Home, Insert, Design, Animation, Slide Show, Review, View, and Special Features. The Object Formatting pane on the right shows the 'Fill' section with 'Solid fill' selected and a transparency slider set to 0%.
