

Step 7 – Part B – Edit Videos

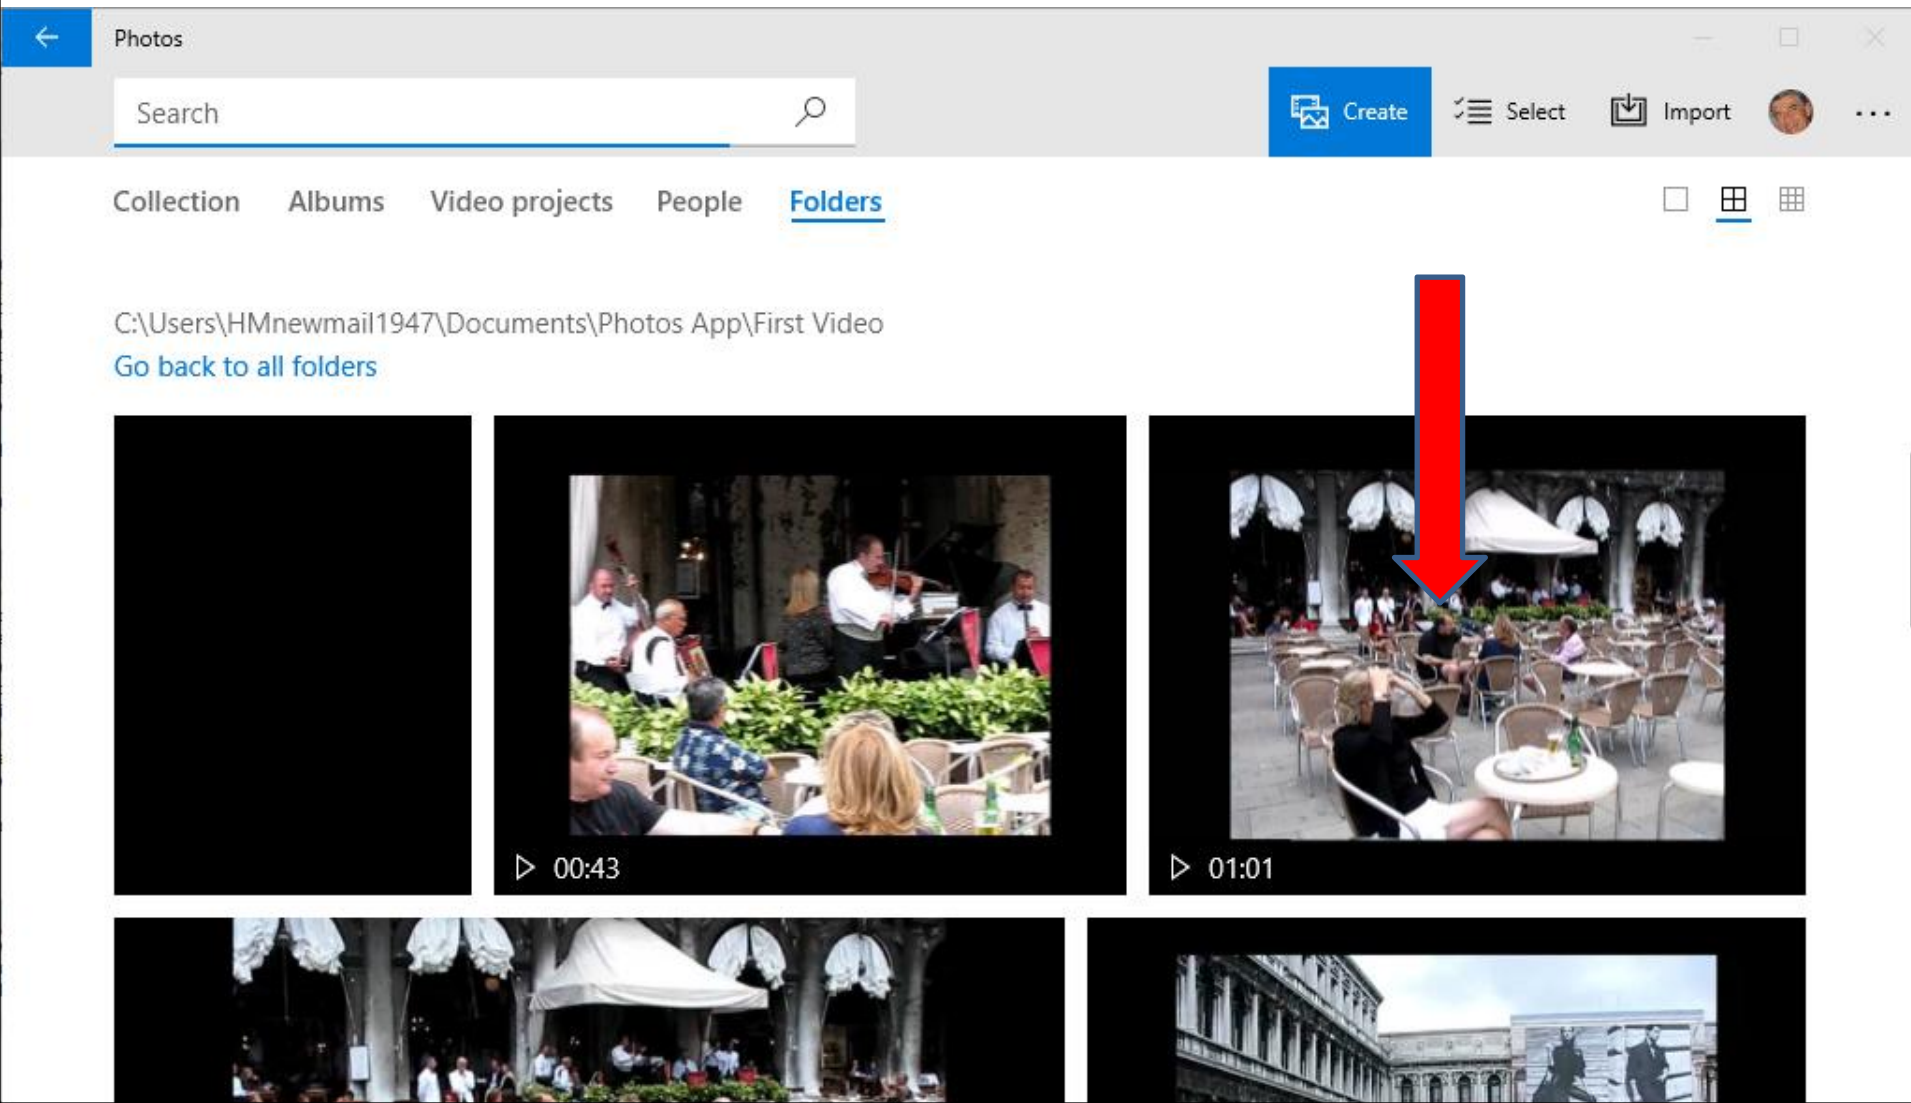

- Photos App allows you to Edit Videos. There is 5 features to Edit a Video.**
- The first feature is if you have Music on your Video, you can change the volume. Once you do that it changes the volume on the Video in your computer.**
- The second feature is to Trim the Video. Trim allows you to remove part of the beginning of the Video and part of the end of the Video. It does not allow to remove part of the middle, like Movie Maker allows. Next is more about Trim.**

- **Once complete, you can save a Copy and then there are two Videos. The Copy removes part of the beginning and/or the end. The other one is original. The reason to do that is if you have a Video that you created with a Camera, sometimes the beginning and end are not good. Once you do a Copy, you can delete the original.**
- **When you go to Create Video with Photo App and add Video, it allows you to Trim the Video. Once you Trim it and Export the Create Video, the Video has removed what you Trim, but the Video on your computer are original. Note – in the Create Video, you can add the same Video 2 or 3 times. Next is more about Trim in Create Video.**

- **The reason to add the same Video again in the Create Video is you can Trim them to remove part of the middle, like Split in Movie Maker. I will show you the Trim in Create Video in Step 8 – Part B. I decided not to Trim and Copy Video in the Edit one vs. Create Video, but I will show you how to Trim with and Copy Video later.**
- **The third feature is Slow the Video and create a Copy of the Video. I tried it and it did not be Slow, but the good news is that you can copy the Video on your computer.**
- **Next is the other features.**

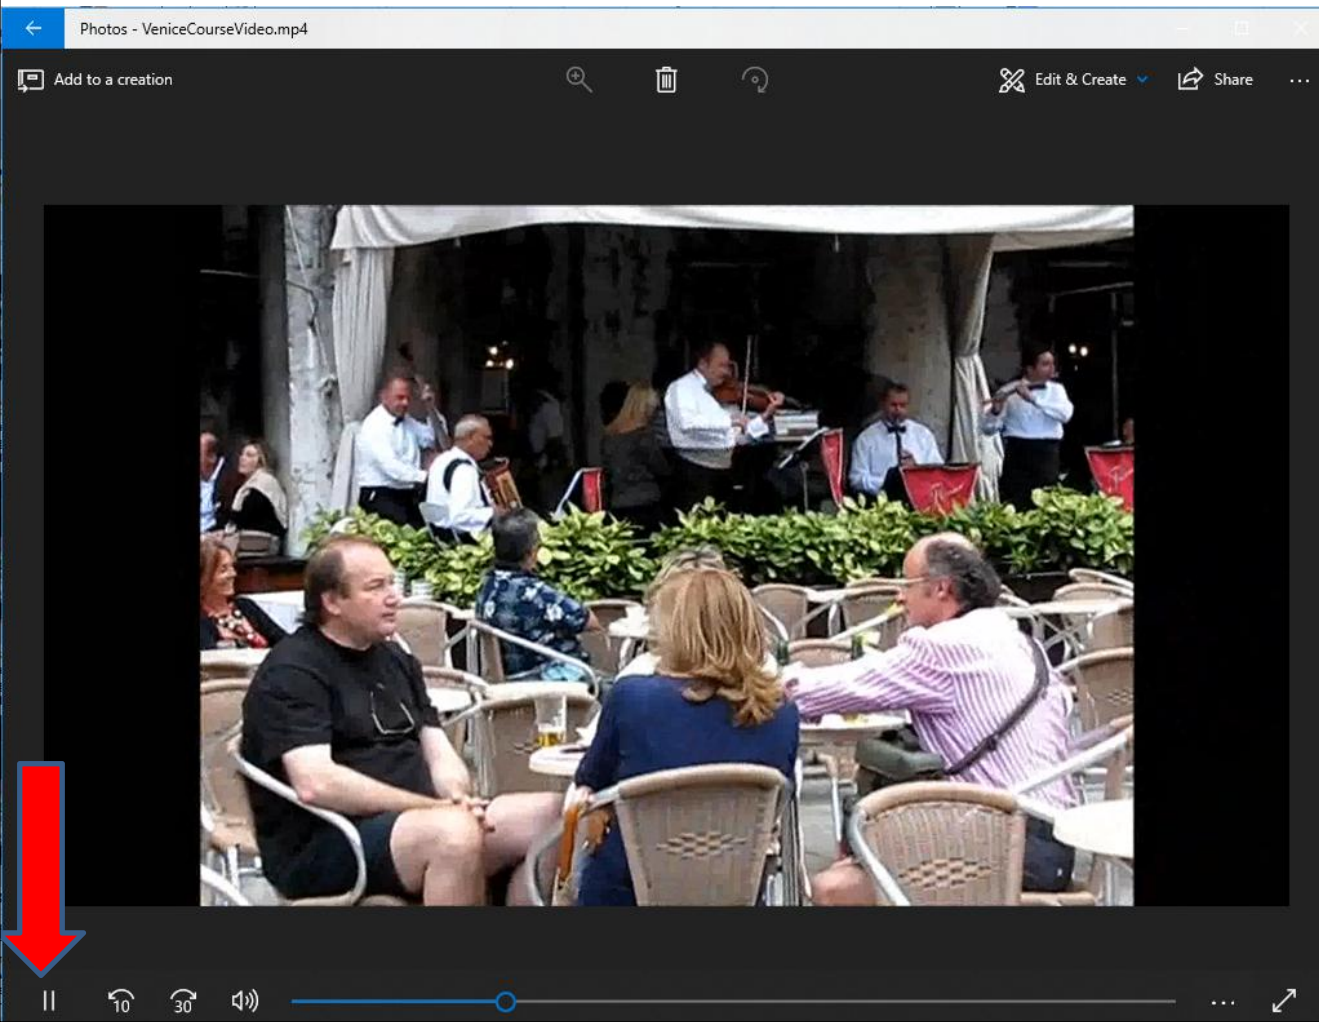

- **The forth feature is you can frame on the Video to save it as a Picture. You can do that a number of times for other Pictures from the Video.**
- **The last feature is Draw. It is the same as I showed you in Part A. When you Create Video with Pictures and Videos with Photo App, it allows you to add the Text to Pictures and Videos, which is easier. That's why I just do Text on Create Video vs. Draw on Edit Video, but I will show you a sample of Draw later. Next I will show you how to get to the Video and Edit it.**

- If you just did Part A, you will be in Folders. If not, open Photos App and click on Folders to find your Video. Next is a sample of clicking on a Video.

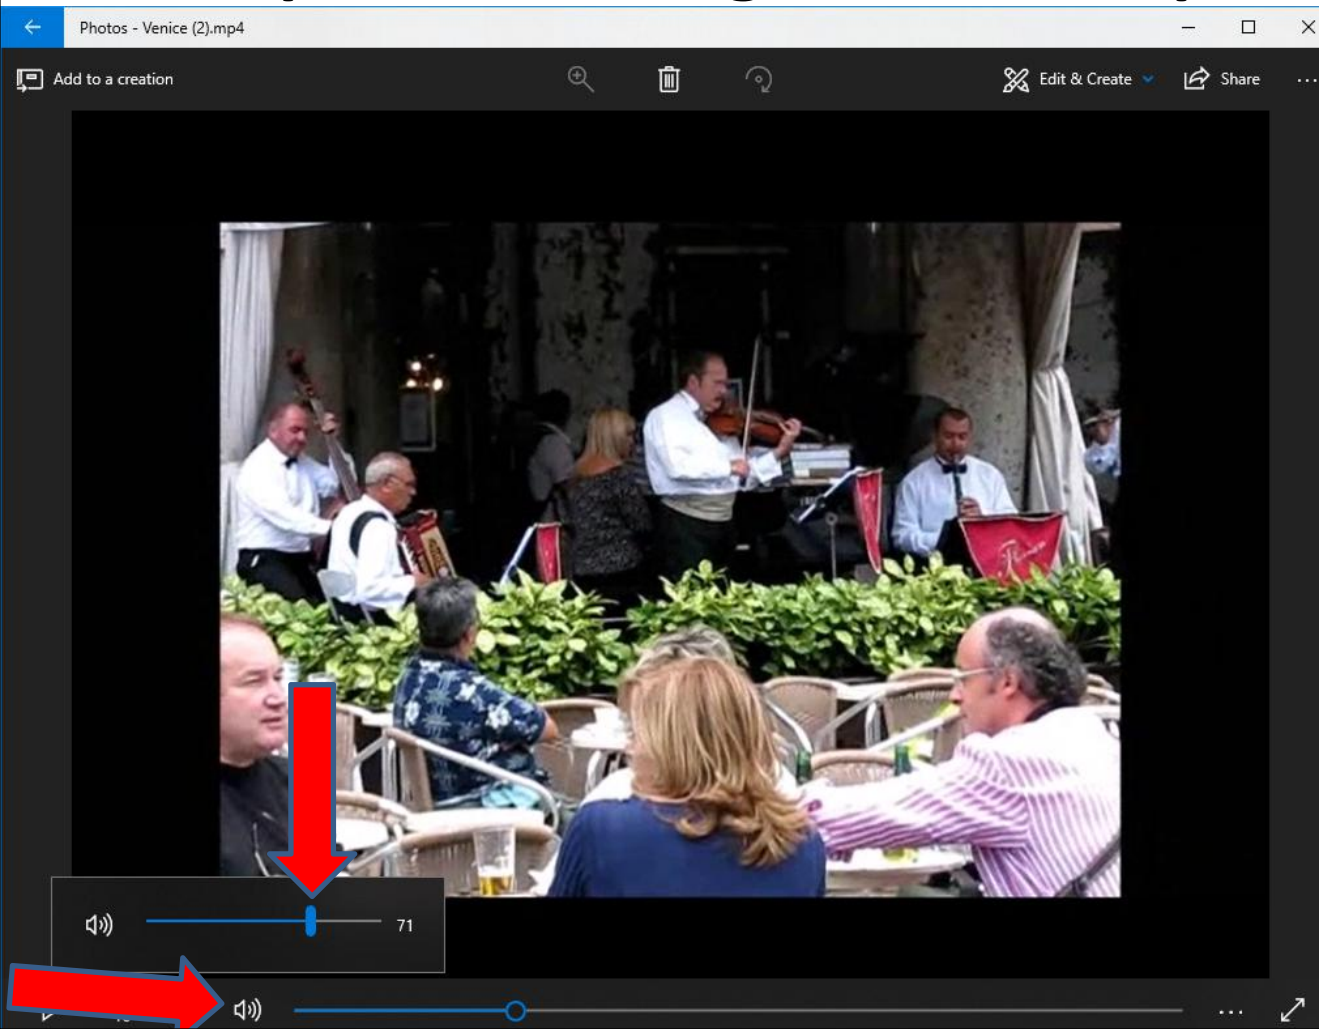

Page changes and it starts to playing the Video. You can click on the pause Icon  in the lower left to find part of the video that you want to frame it and save it on your computer, which is later. Next is to change

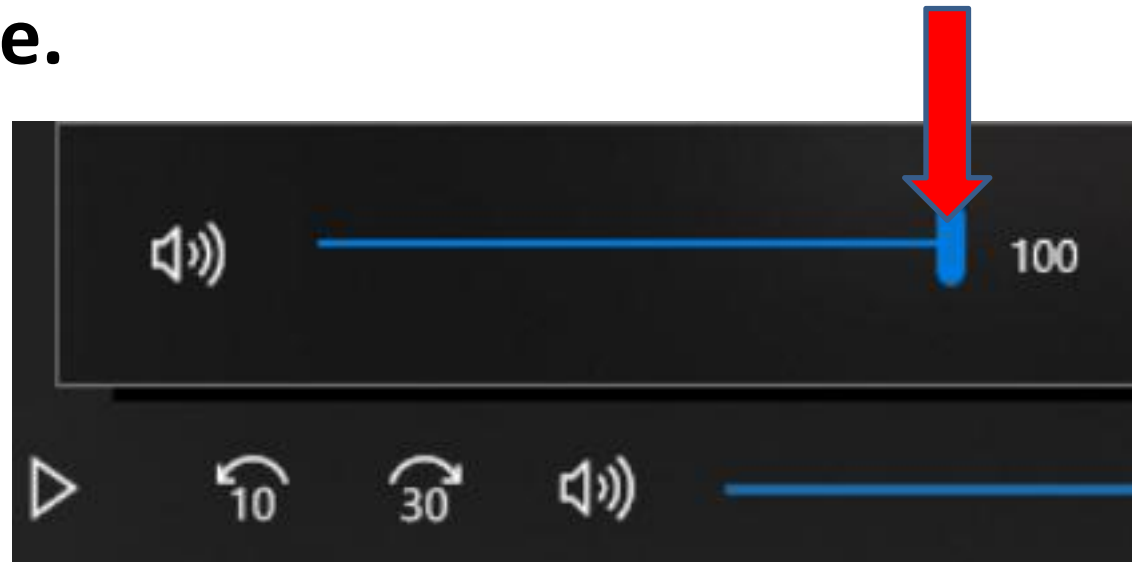

volume.

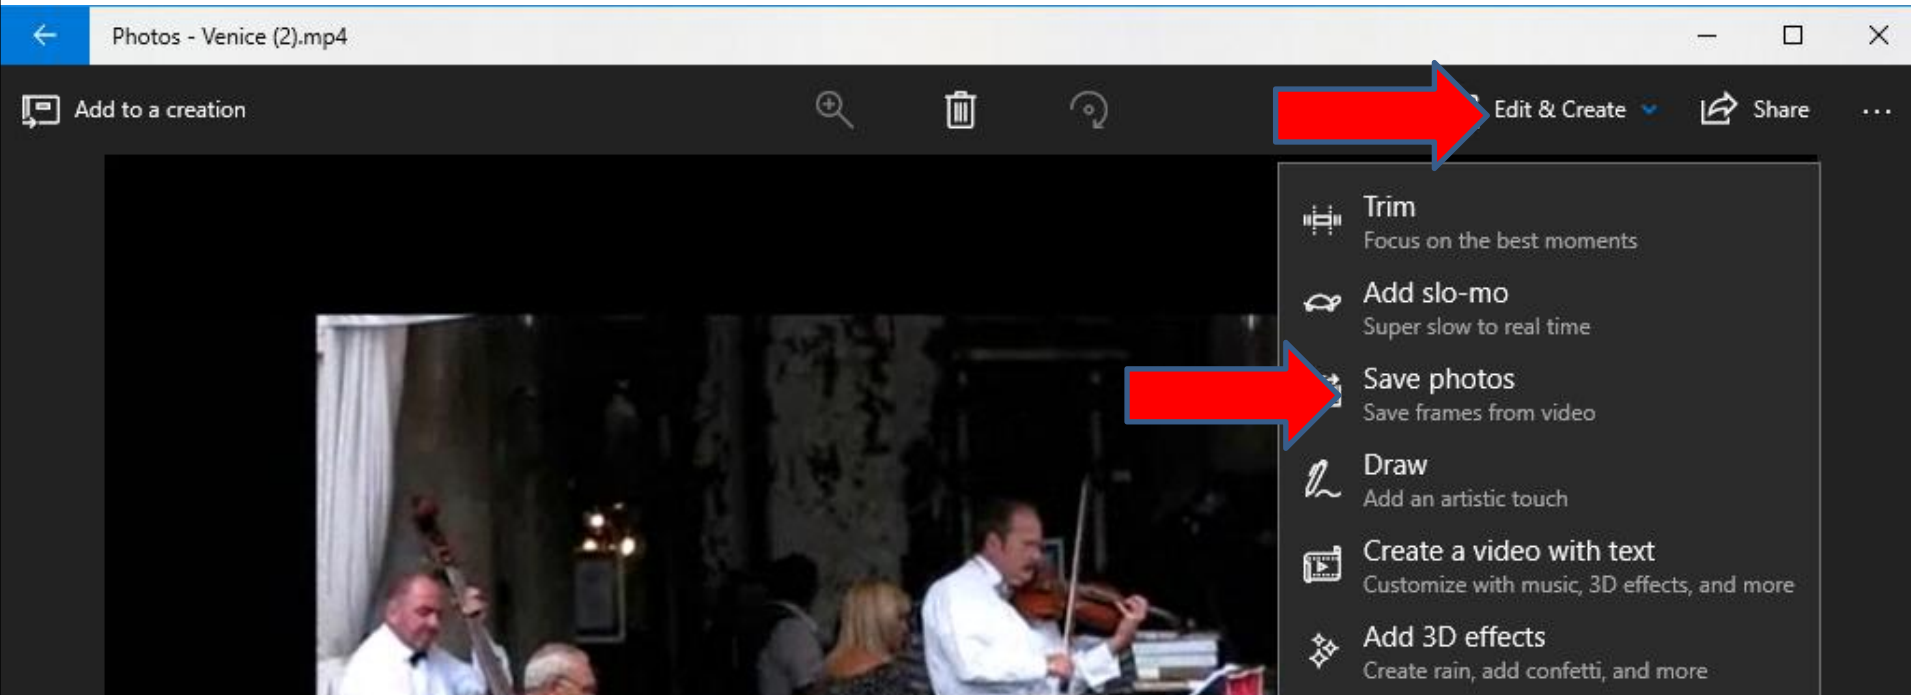

- You click on the Volume Icon  on the lower left, like I did and you see the Volume. Then right click and hold it down on the Icon  and drag the Icon on top to left or right. Next explains it.

- If you drag it to the right, like I did, it increases the Volume. If you drag it to the end of the left, it mutes it and the Music no longer plays. If you don't like the Music on your Video, I recommend you mute it. Note – the Create Video project also allows you to change Volume, but when you Export the Create Video, the Music Volume on the original Video is not changed.
- Next is Edit & Create.

- You can click on Edit & Create and you see a list and they added a new one at the bottom with the new version as I showed in Part A. I decided to wait to a place that I want to frame it. Then click on Save photos. Next is a sample.

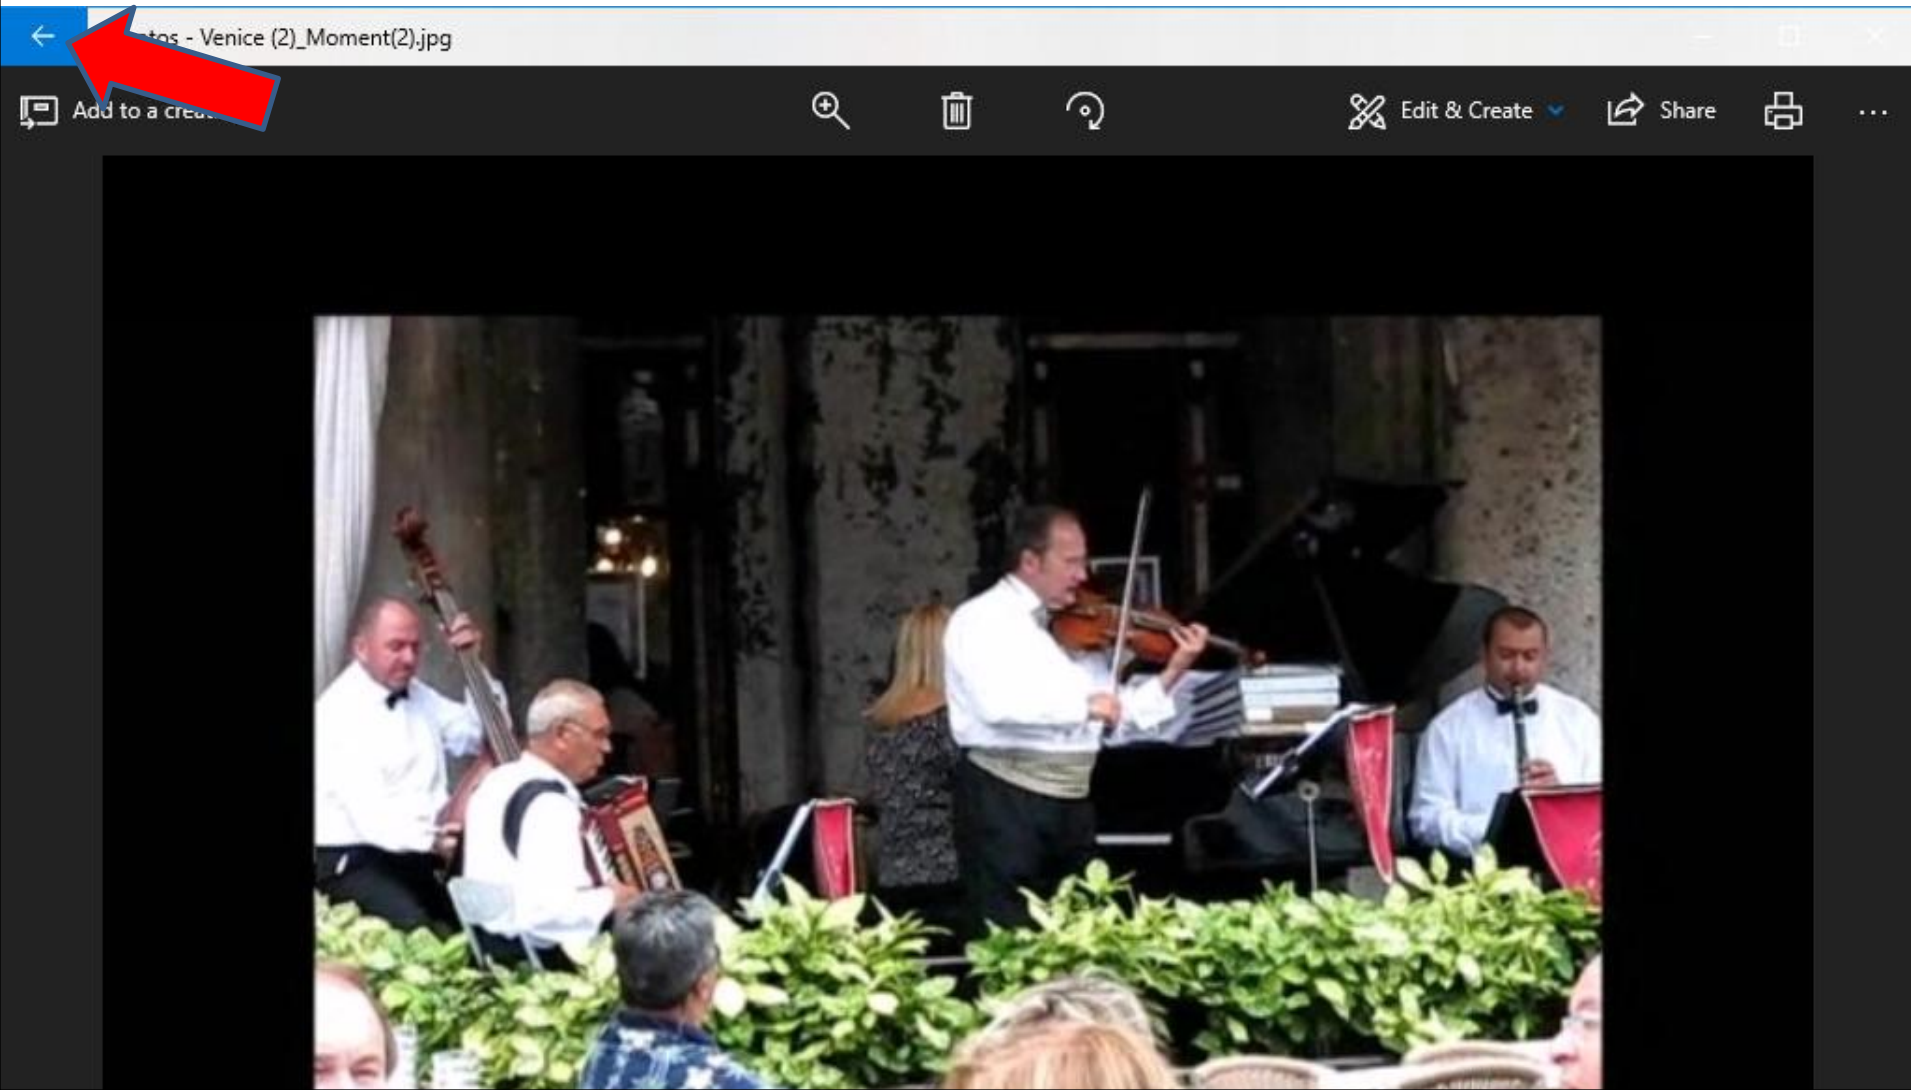

- Page changes to Save photos. If you want the Picture, you can click on Save a photo in the upper right. Next is a sample of clicking on it.

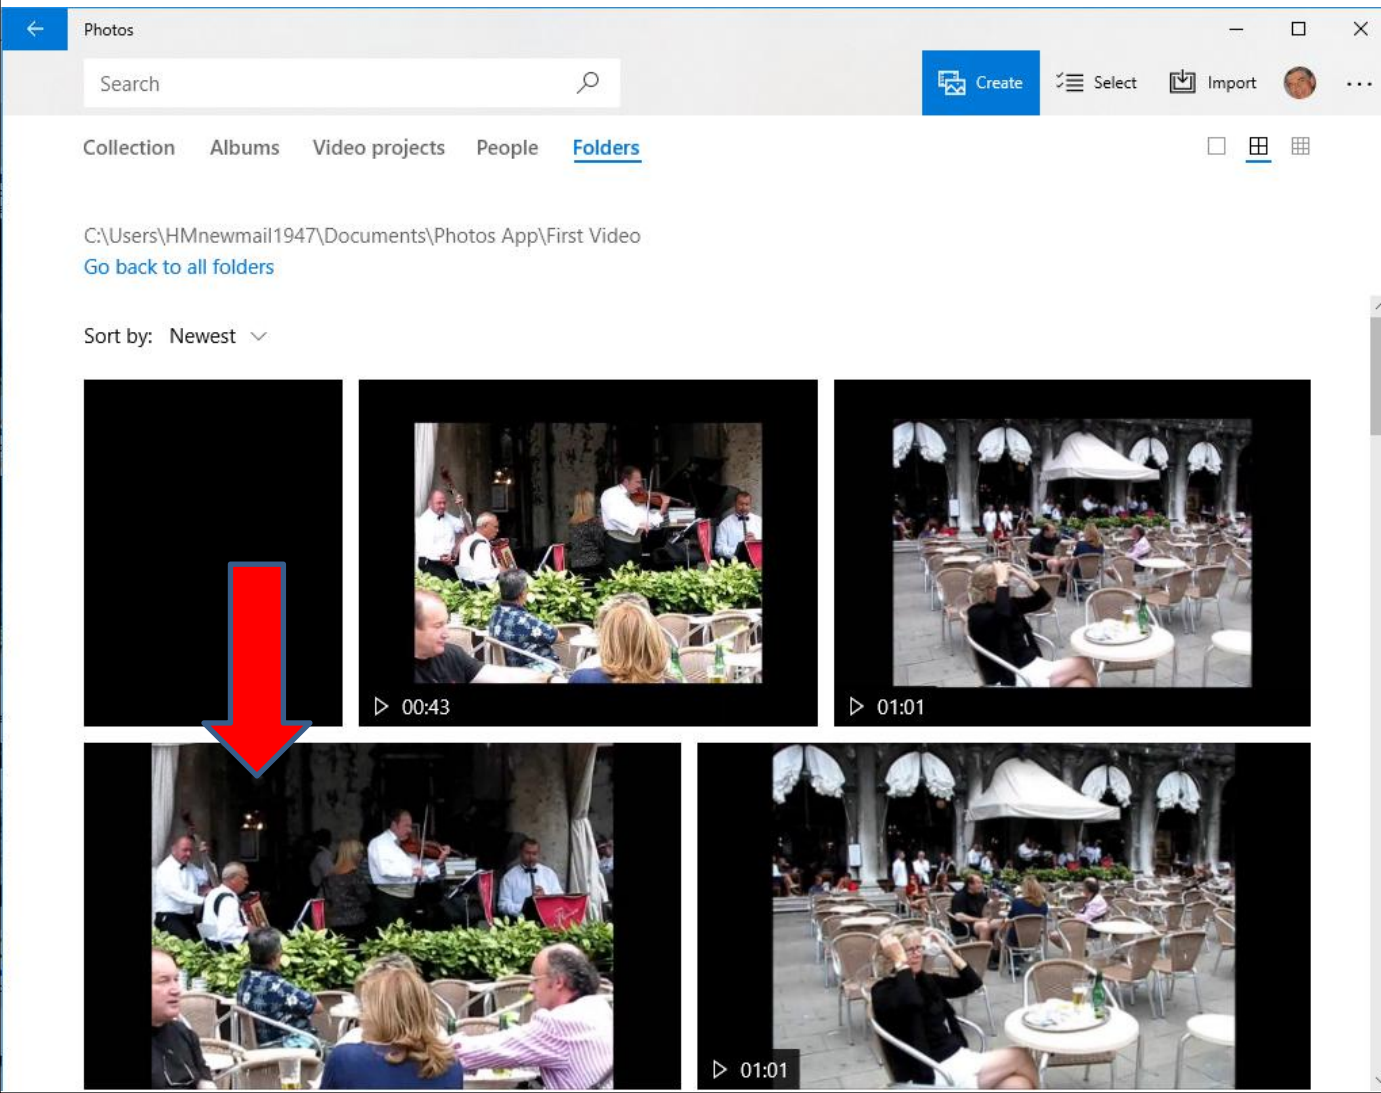

- It is process and once complete, you don't see Save a photo highlighted. Click on Cancel in the upper right and next is what happens.

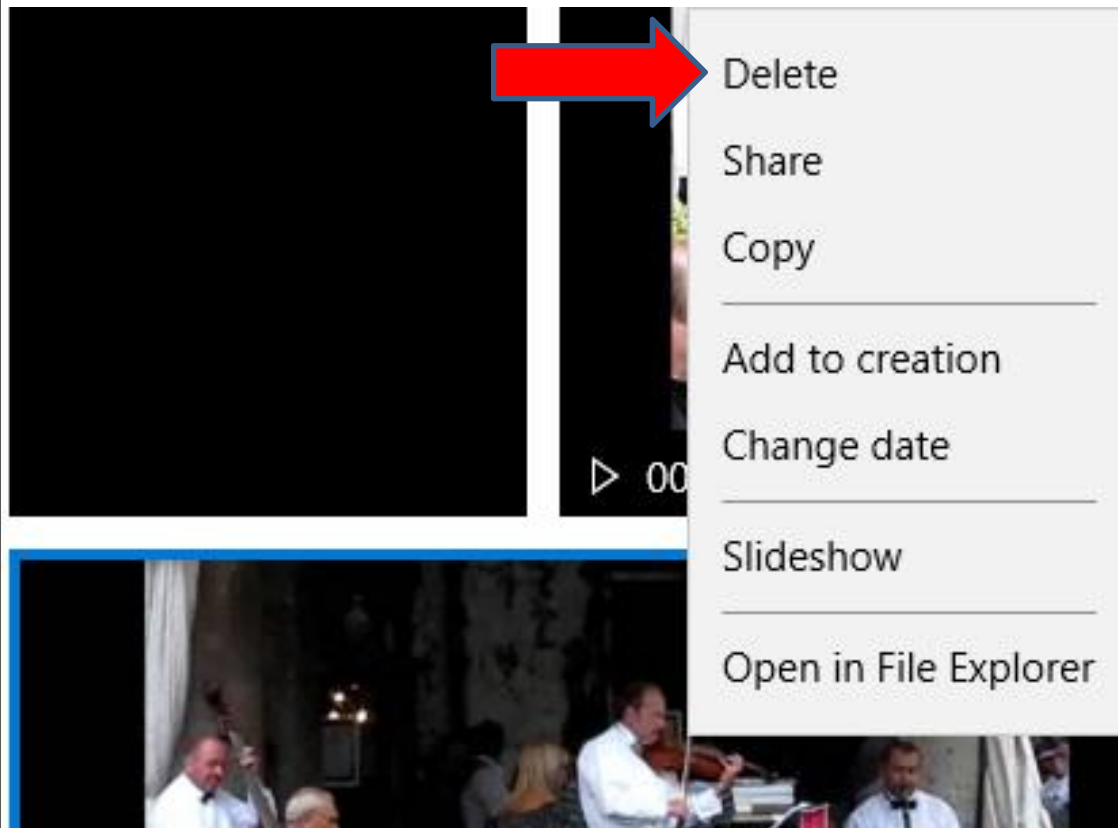

- **Page changes. You click on the Icon in the upper left again to see the Picture in the Folder, which is next.**

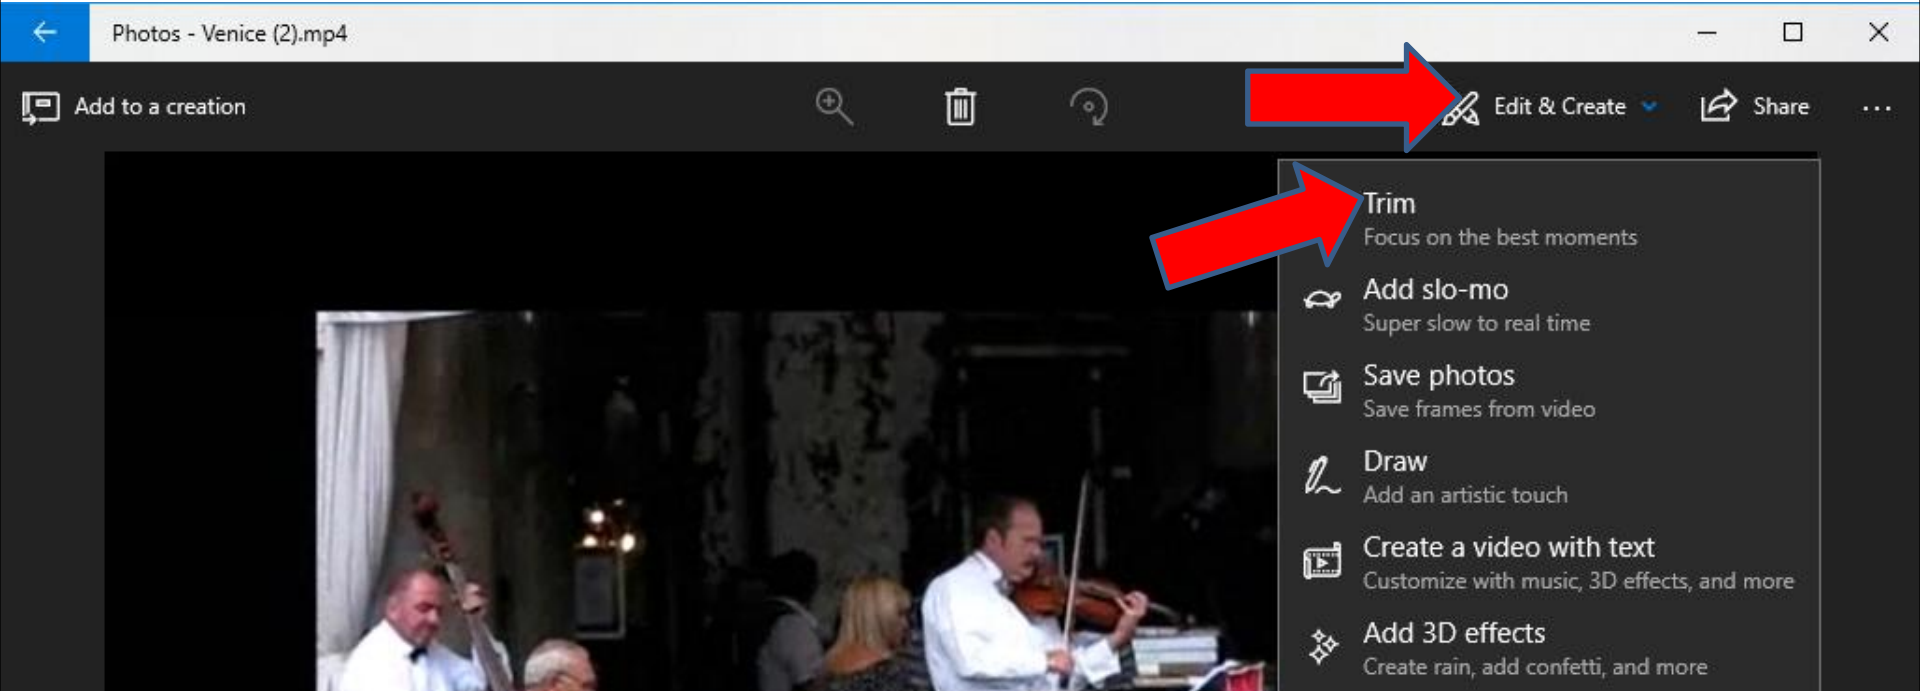

You then see it and it also saves it on tsame Folder on your computer. If you don't like it, you can delete it, which is next.

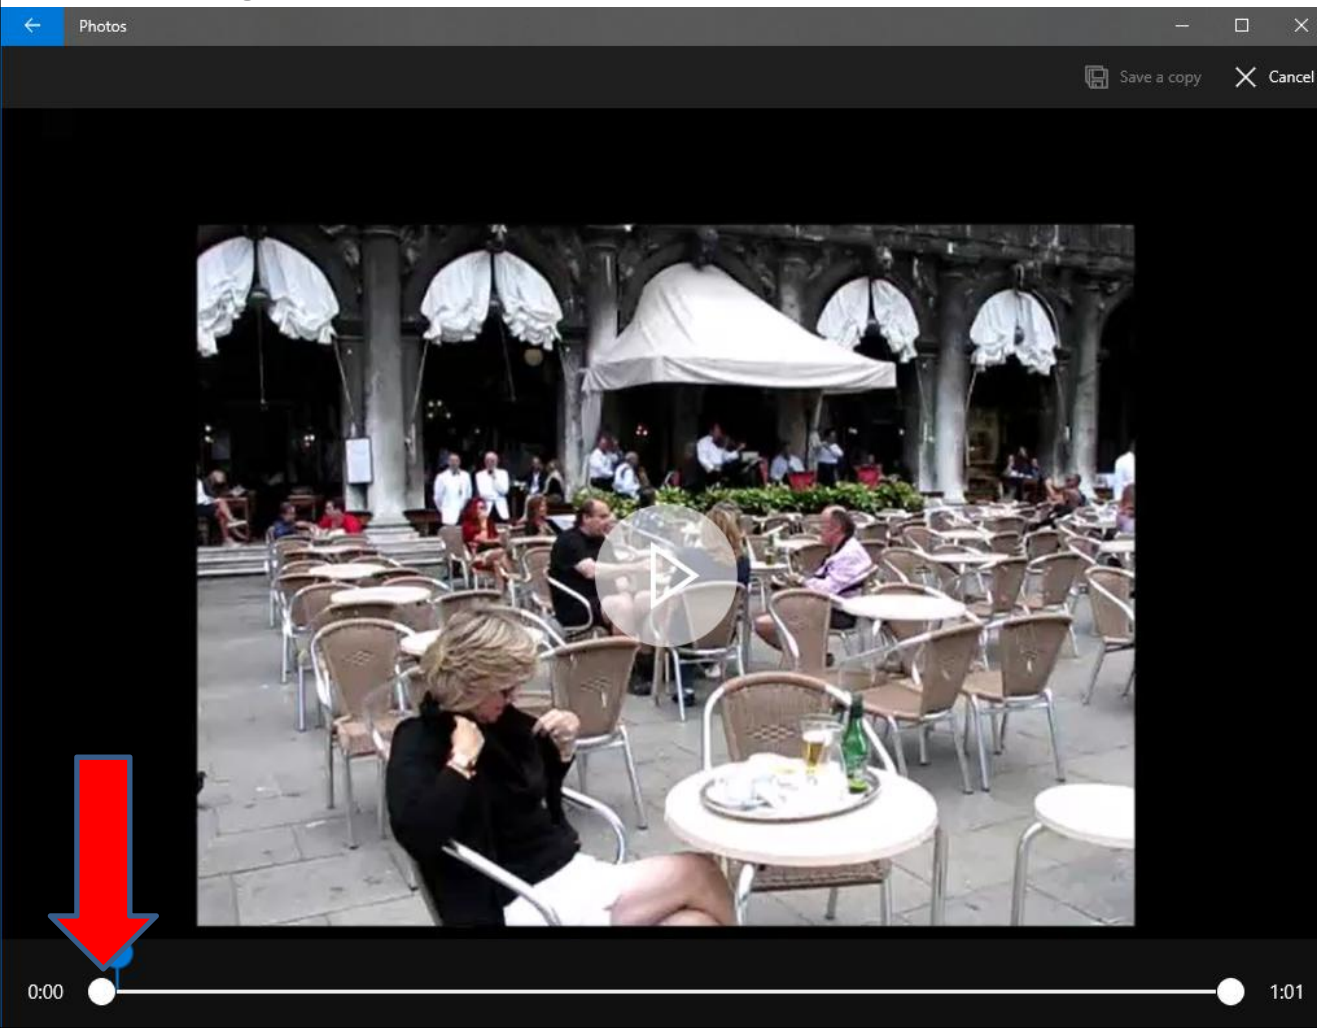

You right click on the Picture and a new window opens with a list with options. If don't like it, click on Delete and it deletes it. I decided not to Delete it. You click the Video again and next is other options.

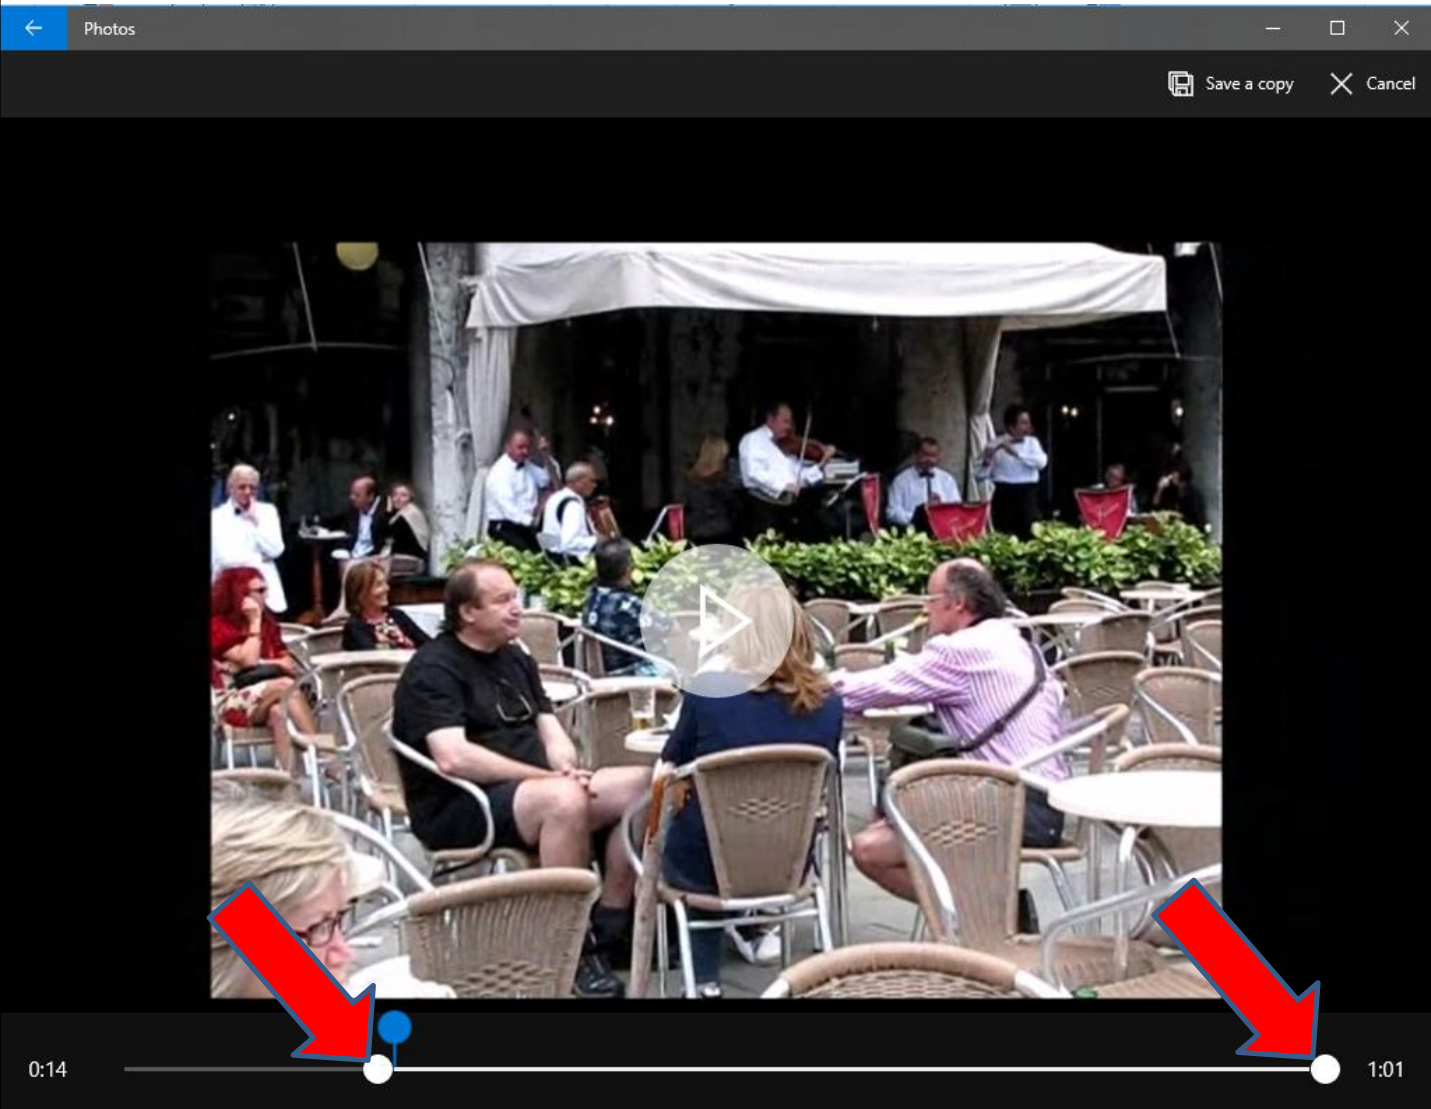

- Page changes again and it starts to play the Video again. You then can click on Edit & Create and then click on Trim and next is what happens.

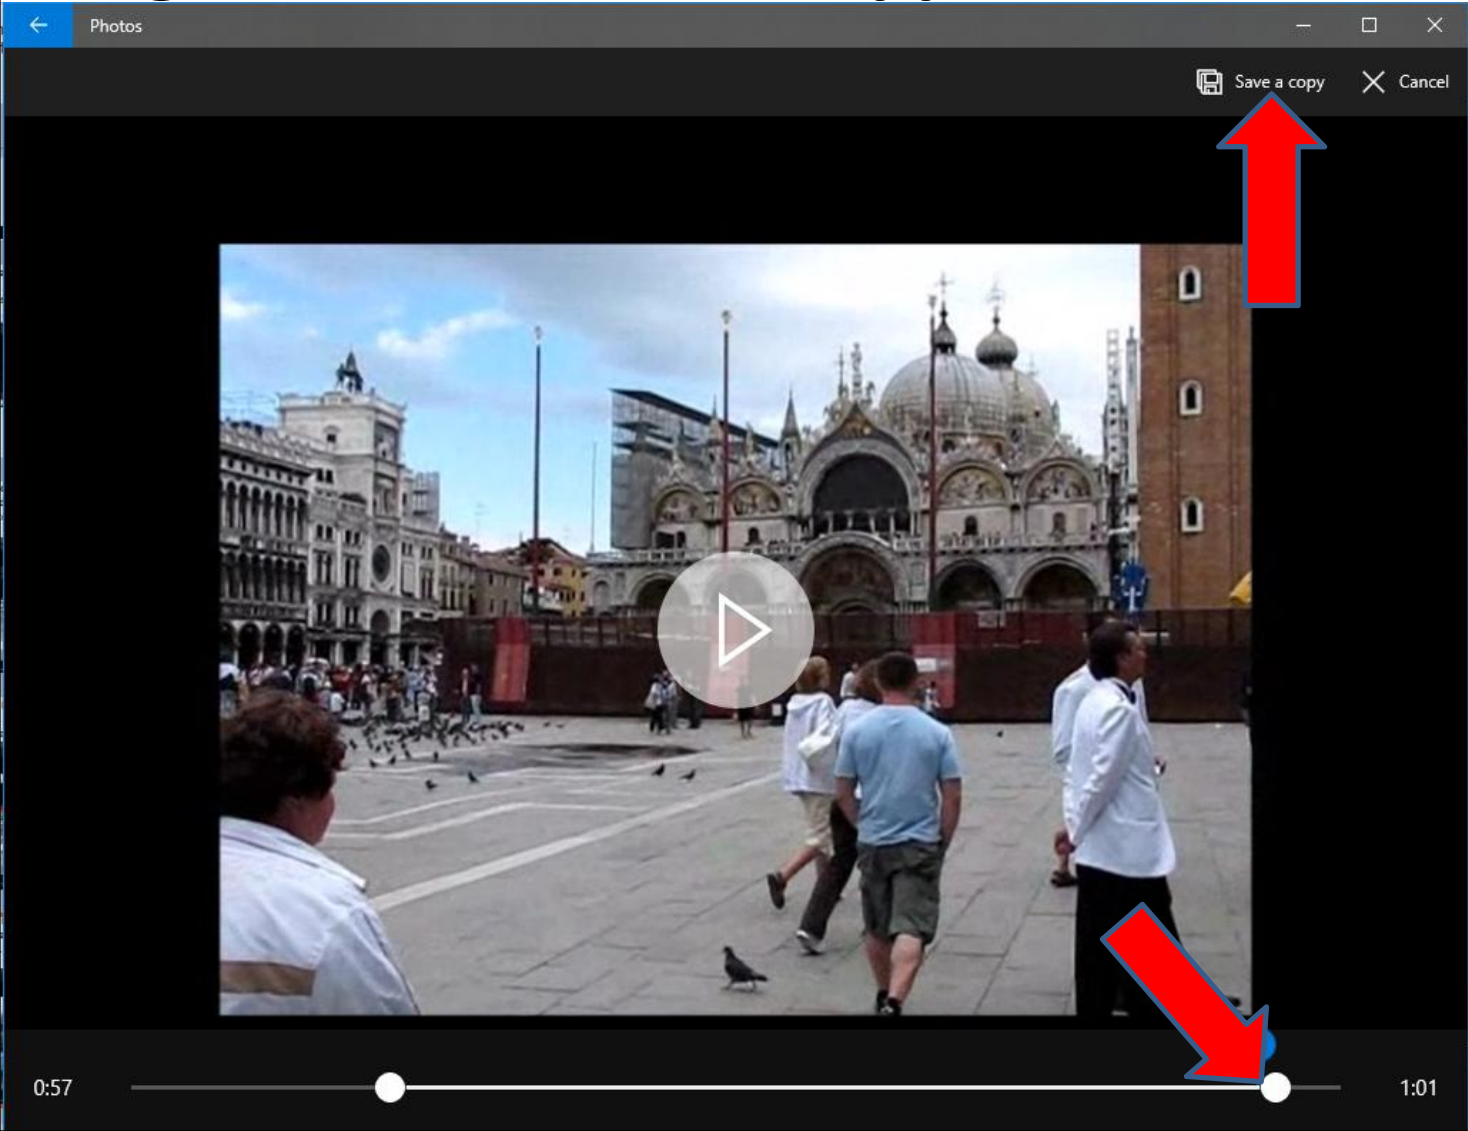

- Page change again and you left click on the Icon  in the lower left and hold it down and drag to the right to the point you want to Trim. Next is a sample.

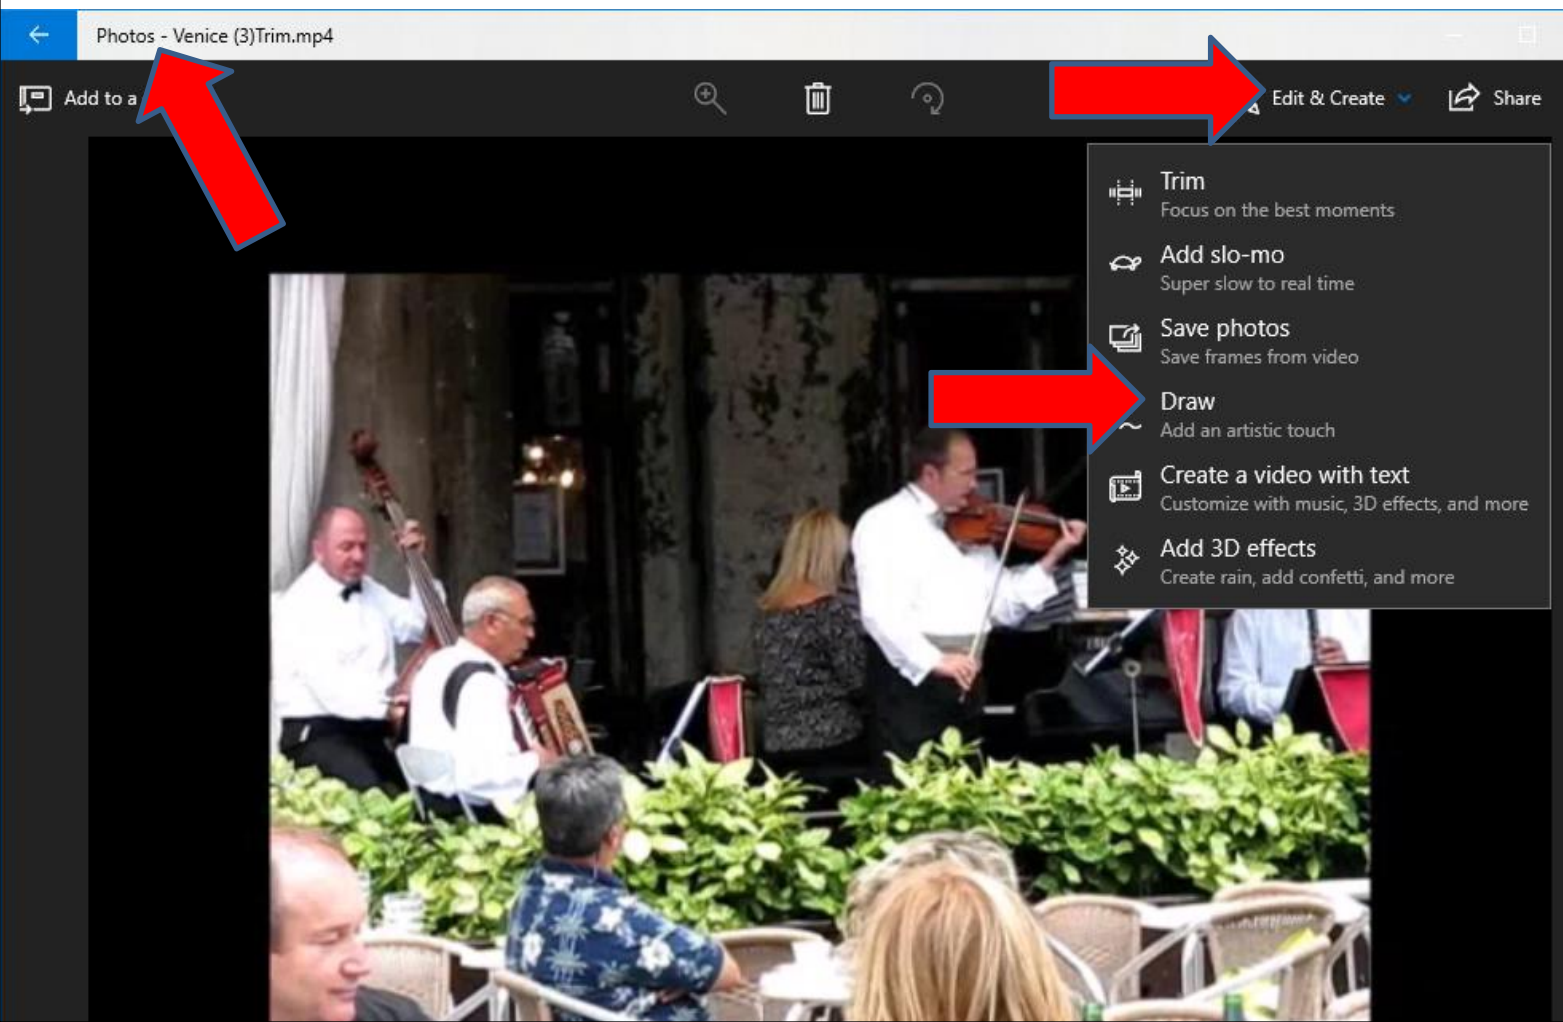

- Here is a sample of dragging it to the right. You can follow the same process on the Icon on the right at the end and drag it left. Next is a sample.

- Here is a sample of dragging it to the left. Once complete, you click on Save a copy in the upper right. Next is what happens.

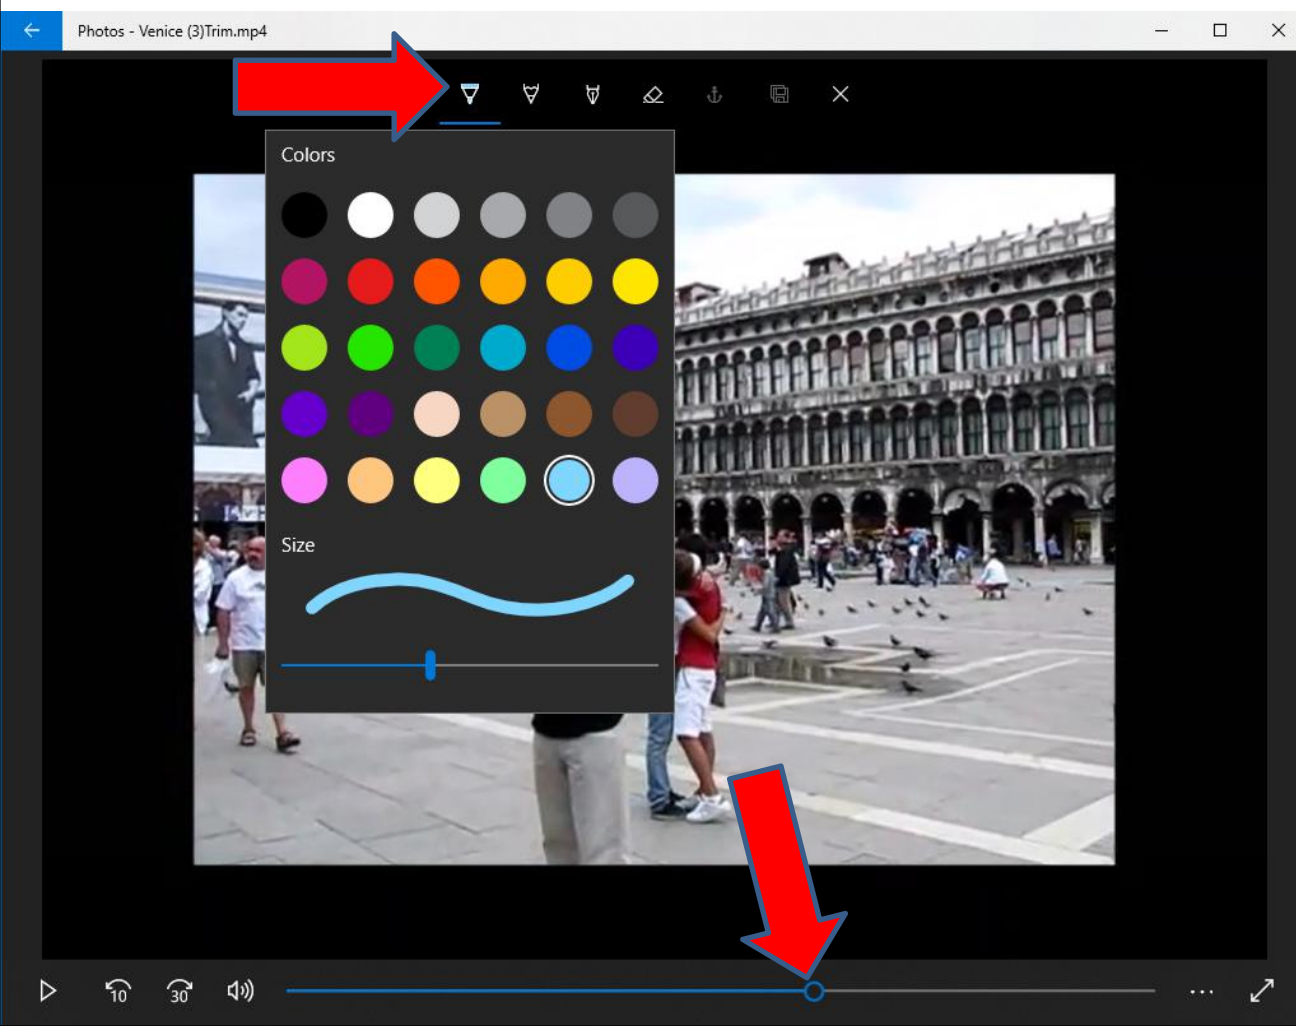

It does a copy and the page changes and you see the name of the file is changed on the upper left and you can click on Edit & Create again and I decided to click on Draw and next is what happens, like in Part A.

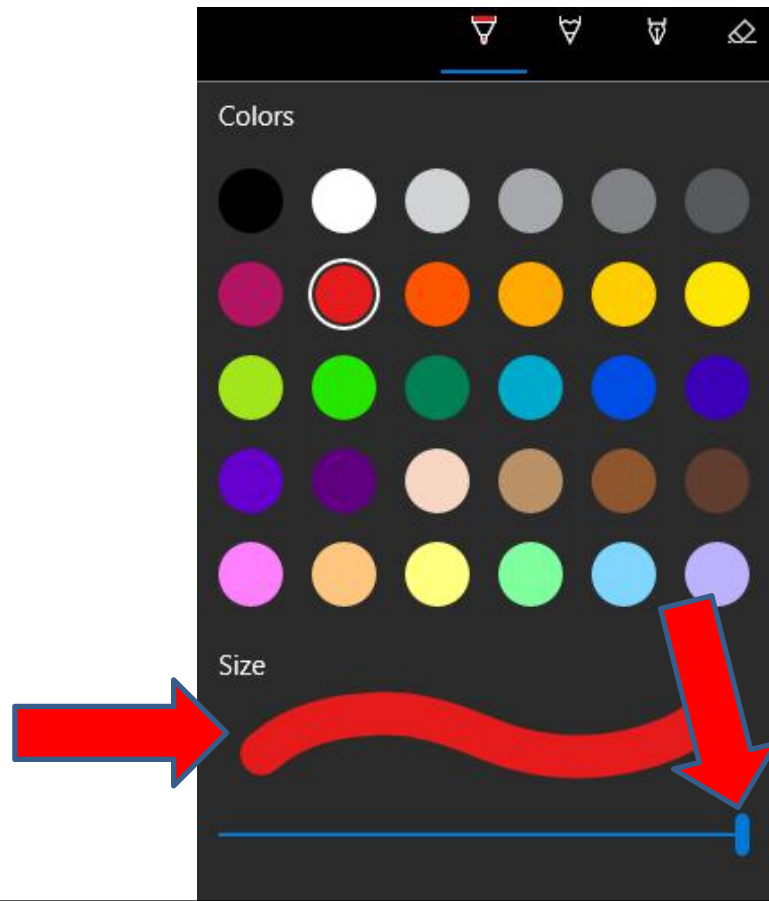

- Page changes and you see the first Icon highlighted. You can then drag the Icon in the lower left to the right to the place you want to Draw. Next is a sample of dragging it to the right.

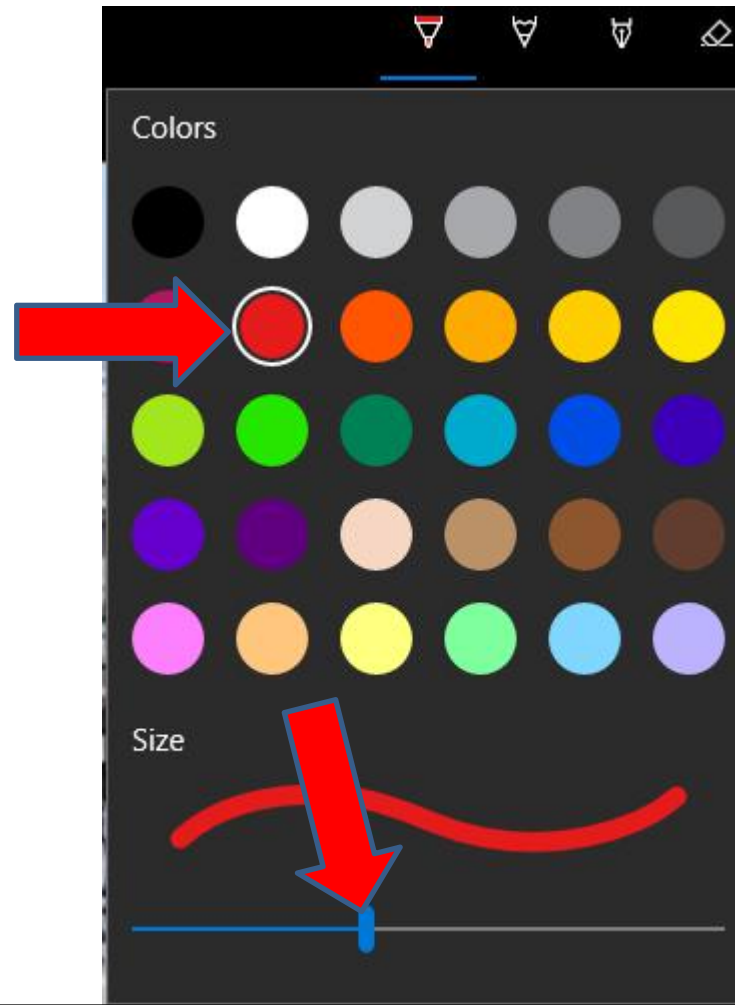

- Here is a sample of dragging it to the right. You then click on the highlighted Icon and you see Colors and Size. You can click on the other color you want. Next is a sample.

- Here is a sample of dragging it to the right and you see the Size is larger. Once complete, window closes. You then go to the place to Draw. You then left click and hold it down and drag it to draw it where you want. Next is a sample.

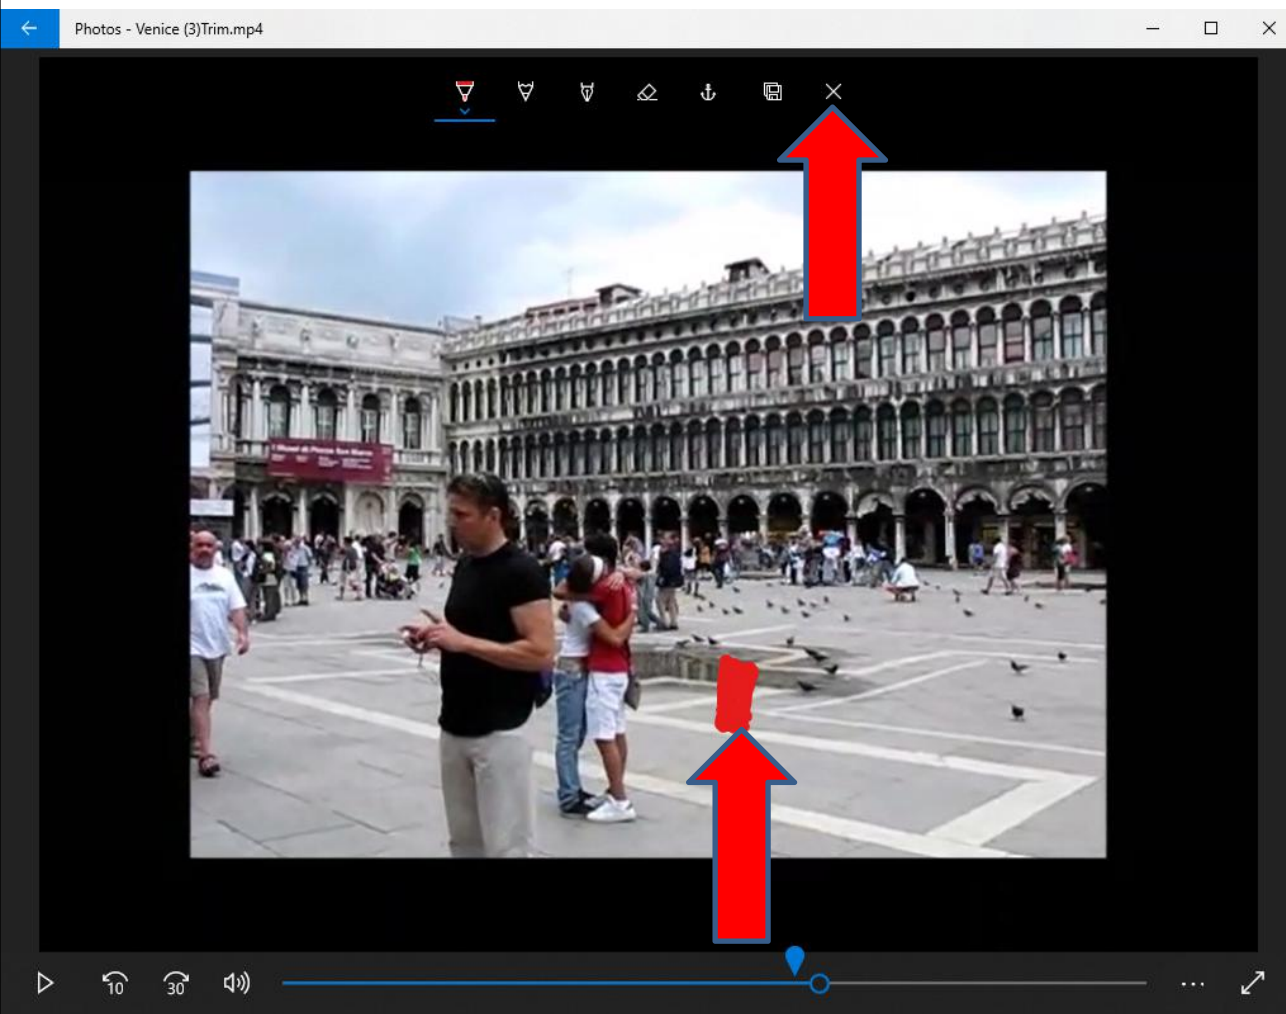

- Here is a sample of clicking on Red. You can then drag the Icon on the bottom to the right or left to change the size. Next is a sample of dragging it to the right.

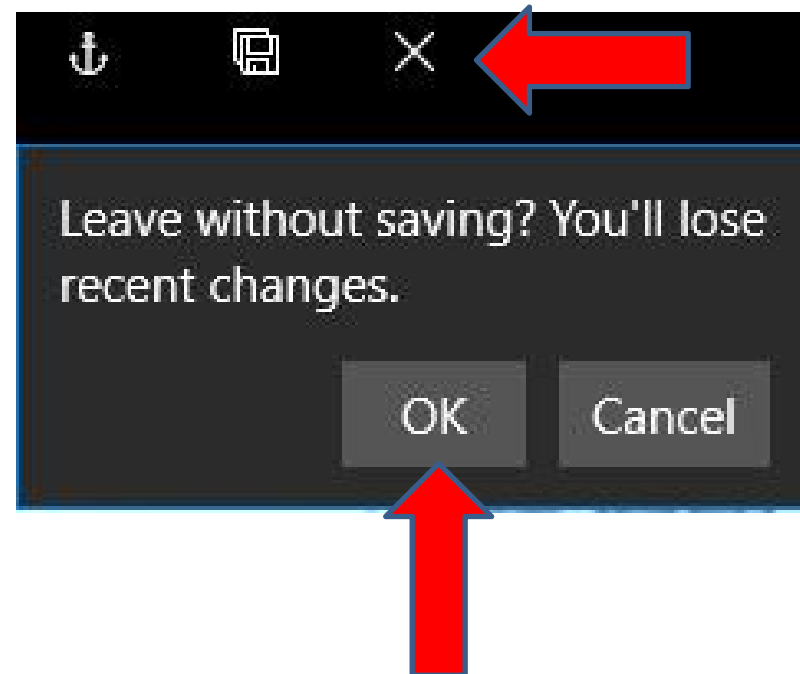

- Here is a sample of a Draw. I decided to change is white short to red. Note – when you play the video it shows it a few seconds and the Draw stays in the middle, which is not good. Next is a sample of playing the Video.

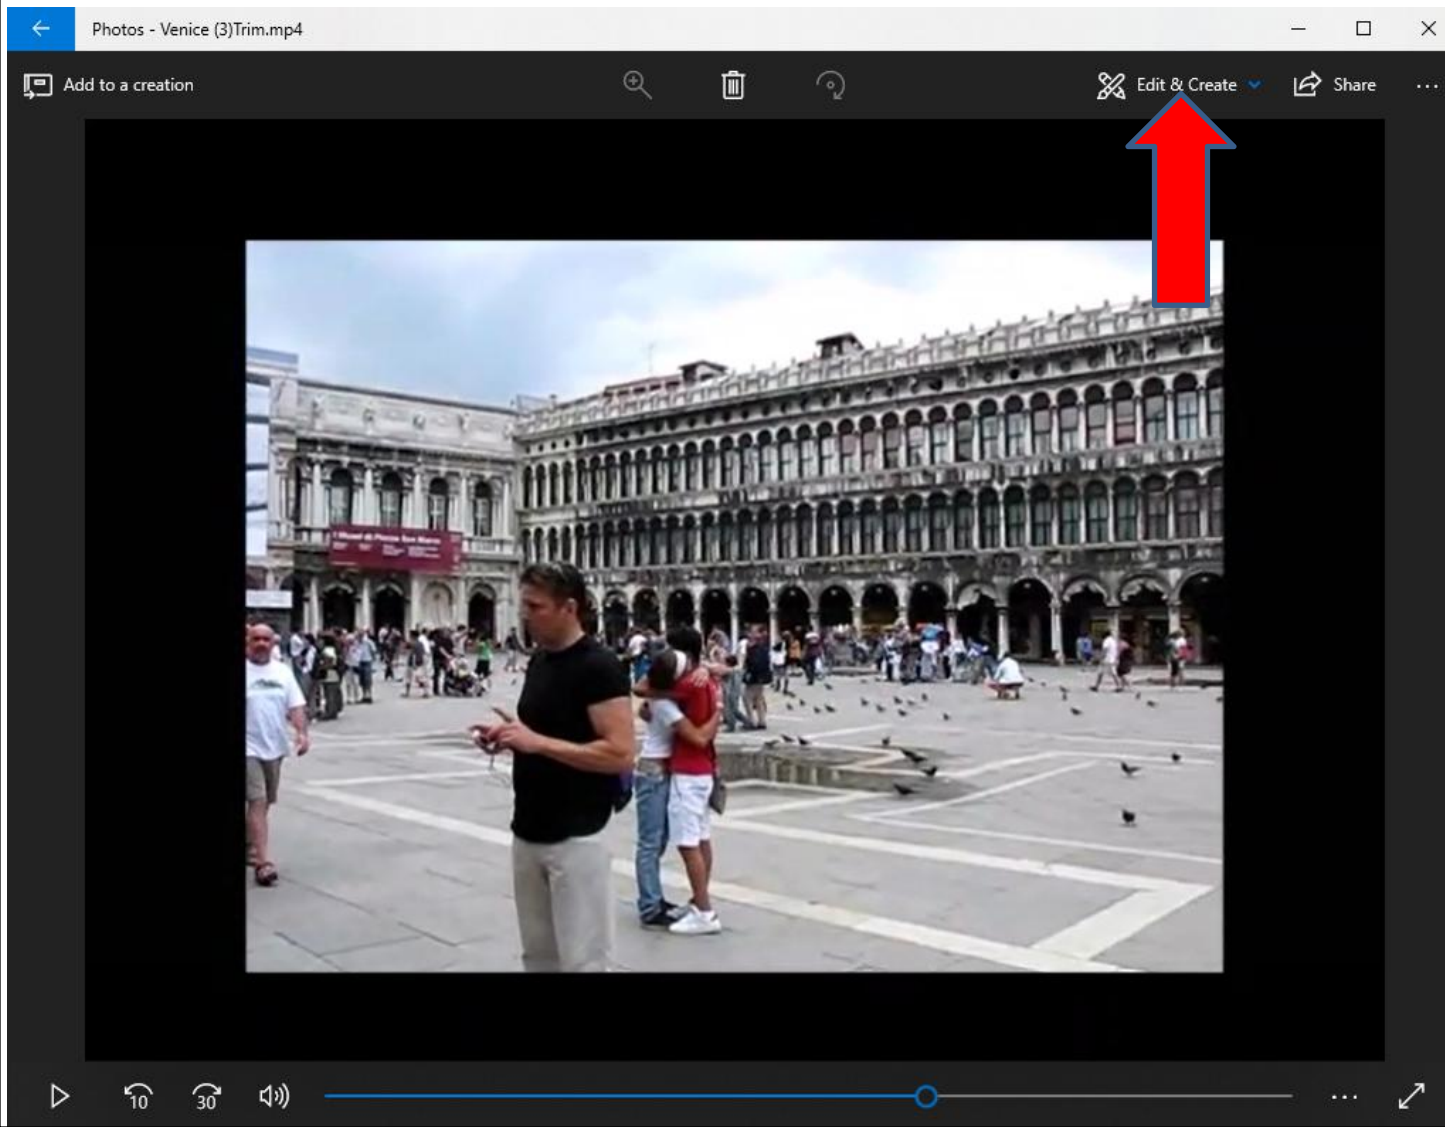

- Here is a sample of you playing the video and you see Draw stays in the middle and not on the short. I decided to click on the X in the middle to remove it. Next is what happens.

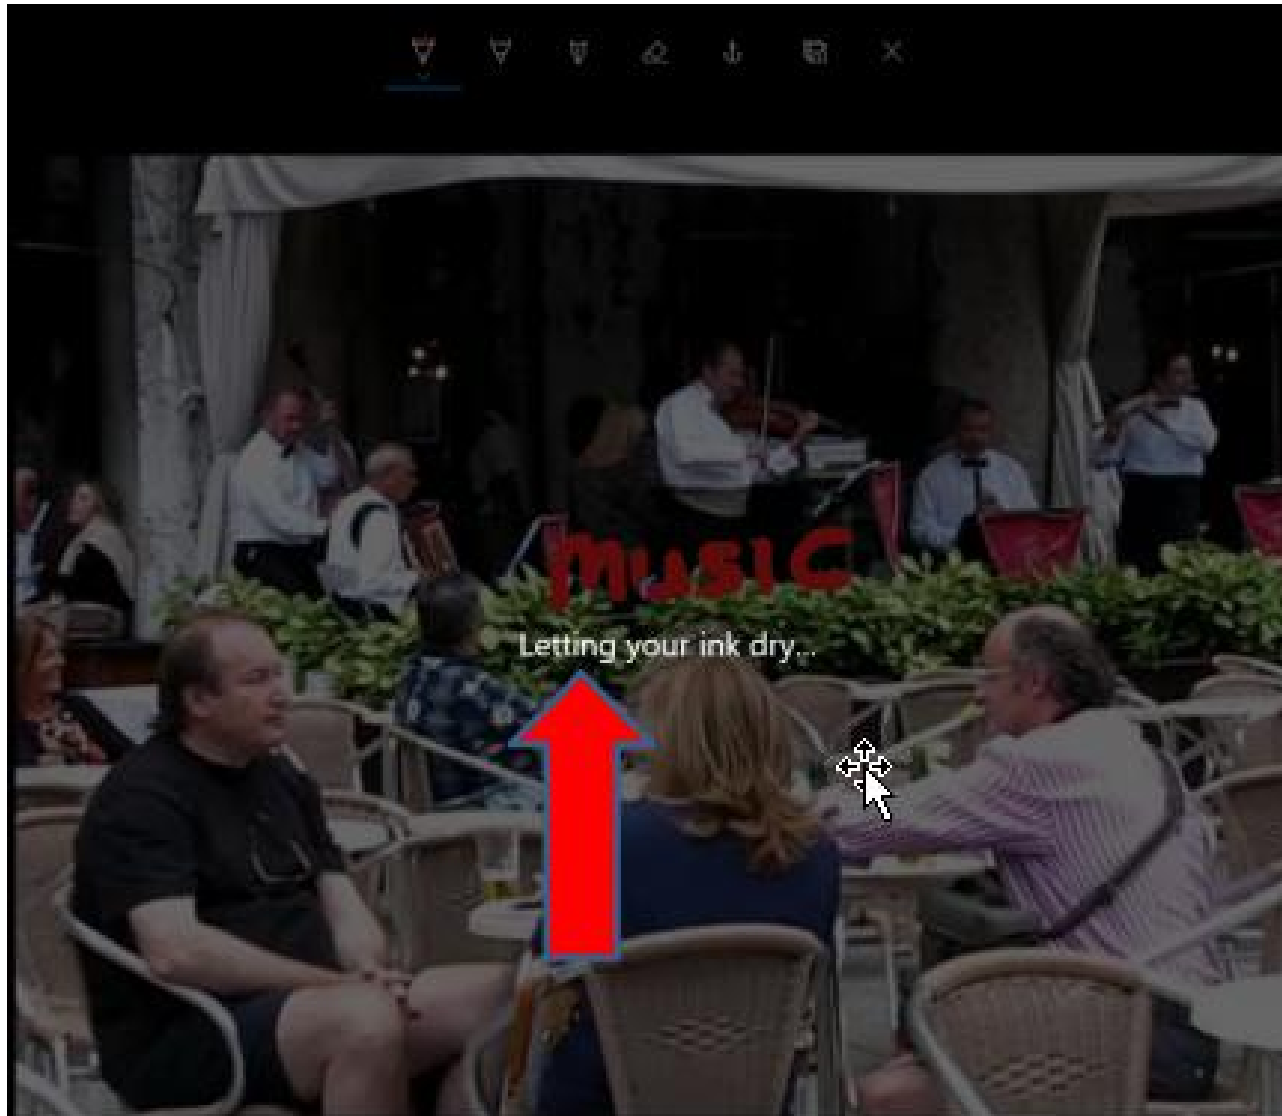

- **When you click on the X in the middle, a new window opens and I decided to click on OK and next is what happens.**

- Page changes and you don't see the Draw. You can click on Edit & Create again. I decided to do that and do a Text Draw which is next.

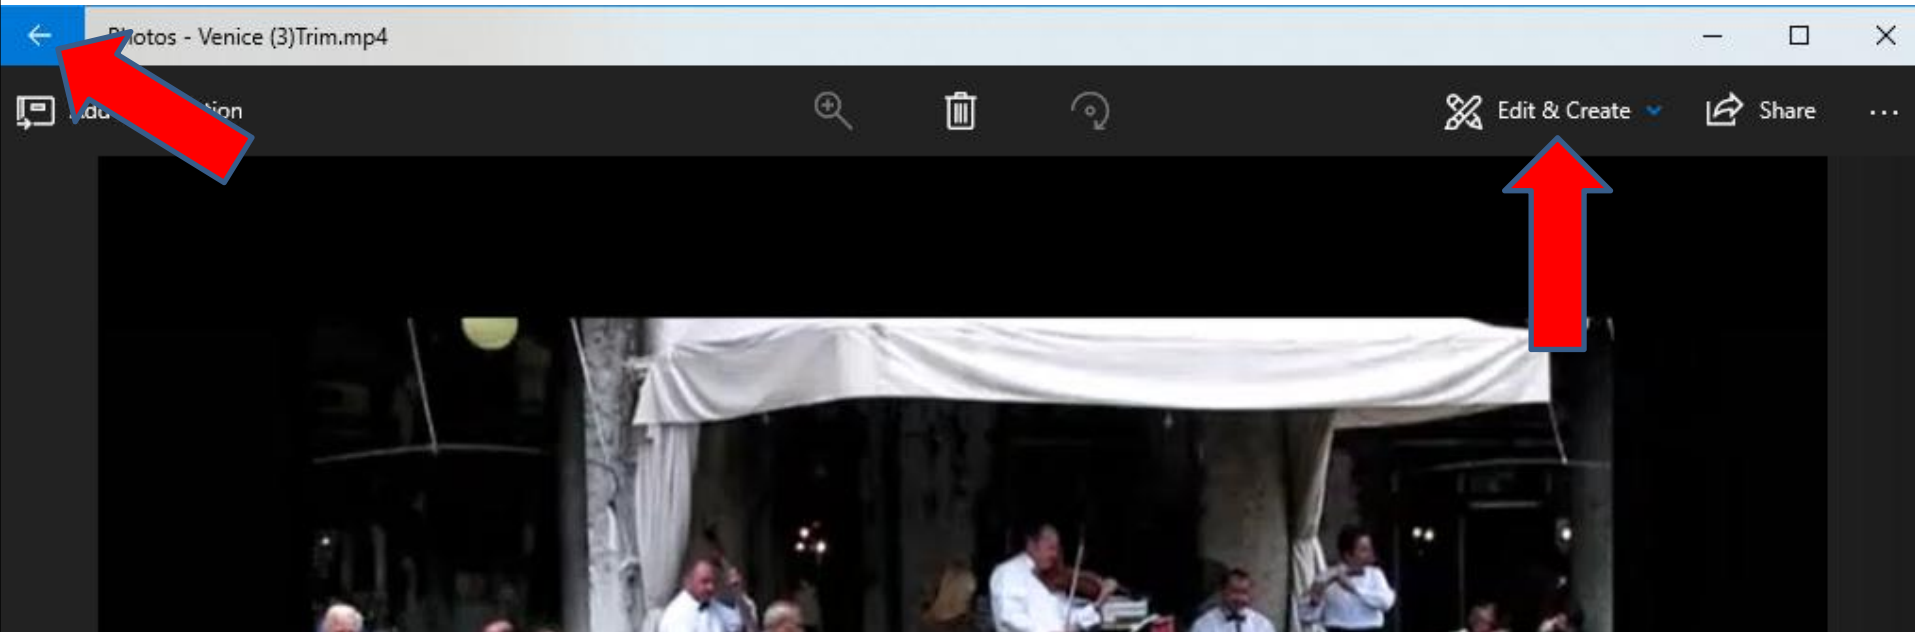

- It shows it is process. Next is what happens when it is complete.

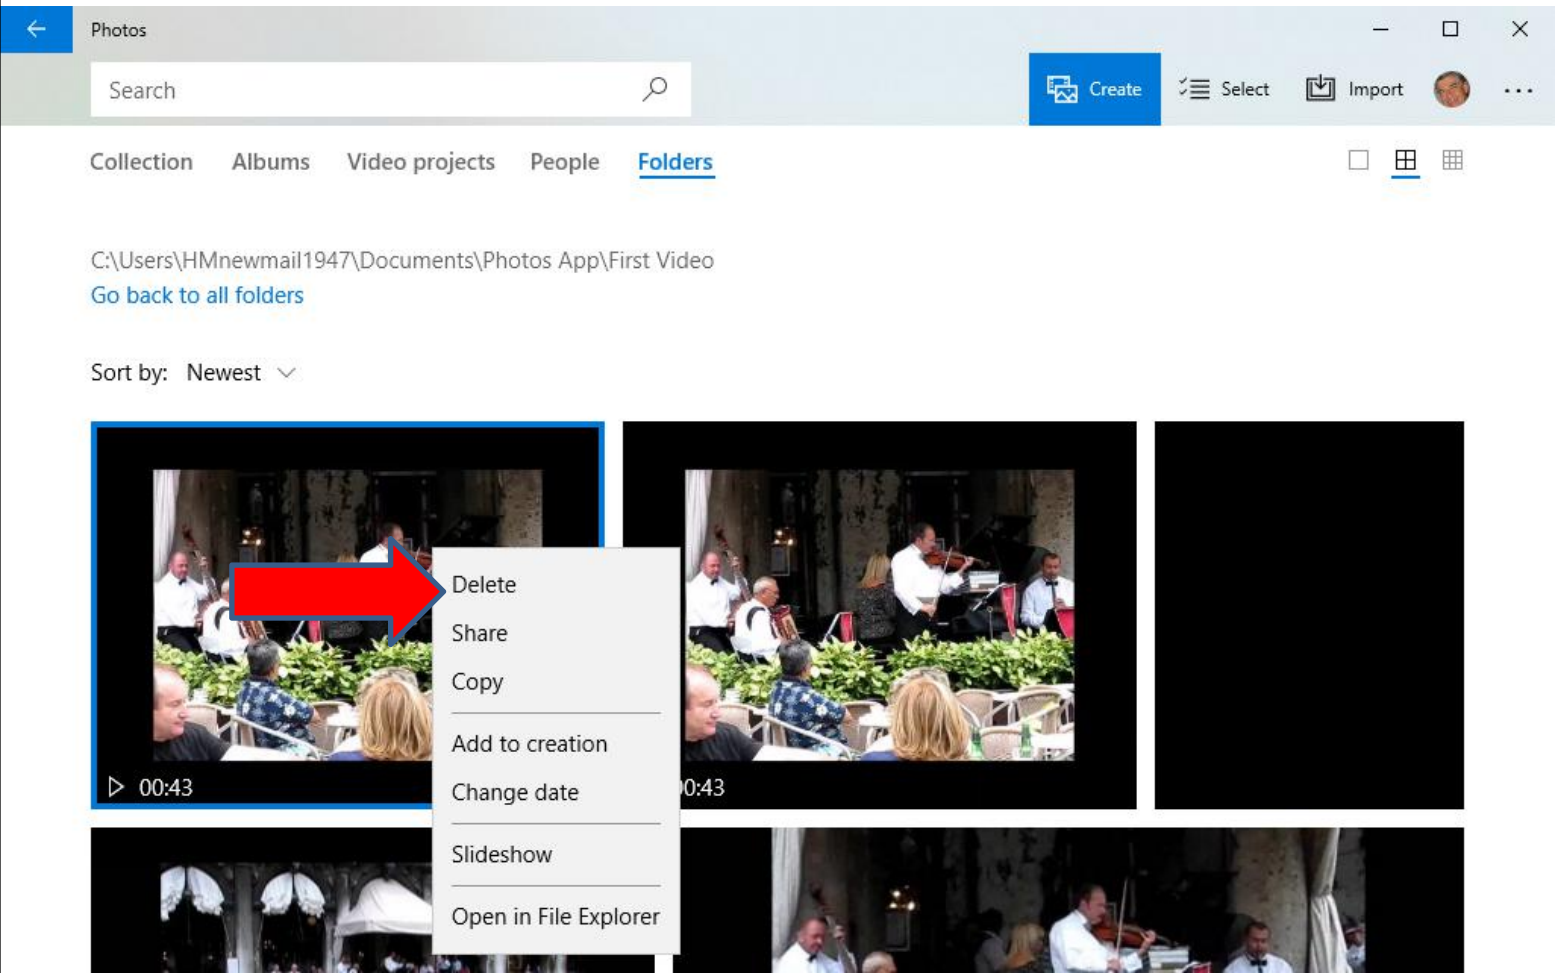

- I decided to change the size and the location and Draw a Text, like Music. As I mentioned before, it is not easy. If you want it, you can copy it again by clicking on the Icon left of X and next is what happens.

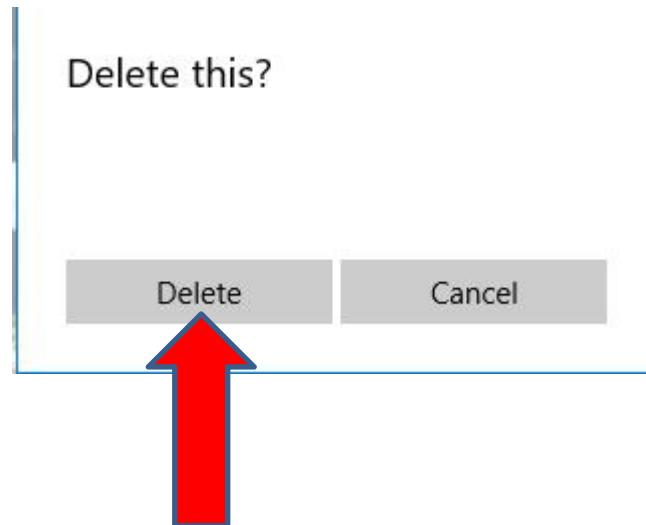

- **When it is complete, you can Edit & Create again or just click on the Icon in the upper left to see the copy of the Video, which is next.**

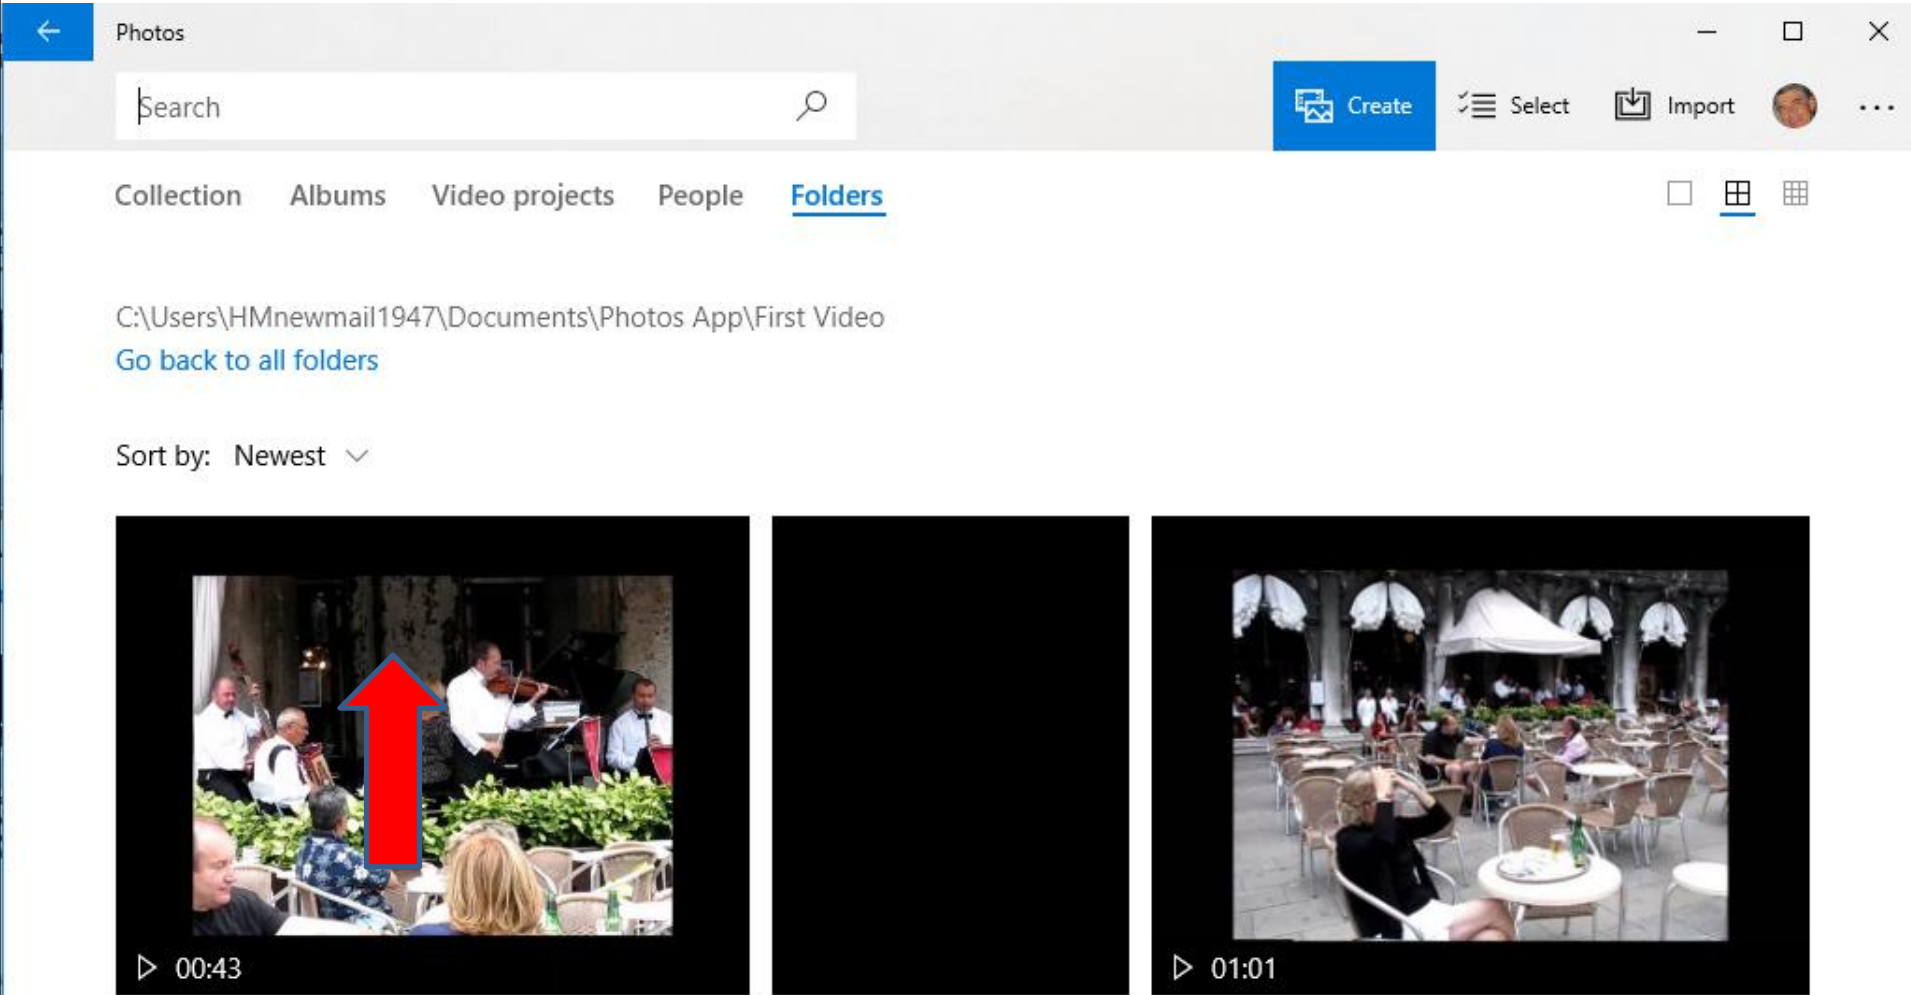

- You see another Copy. As I showed before, you can right click on it and then click on delete. I decided to do that. Next is what happens when you click on Delete.

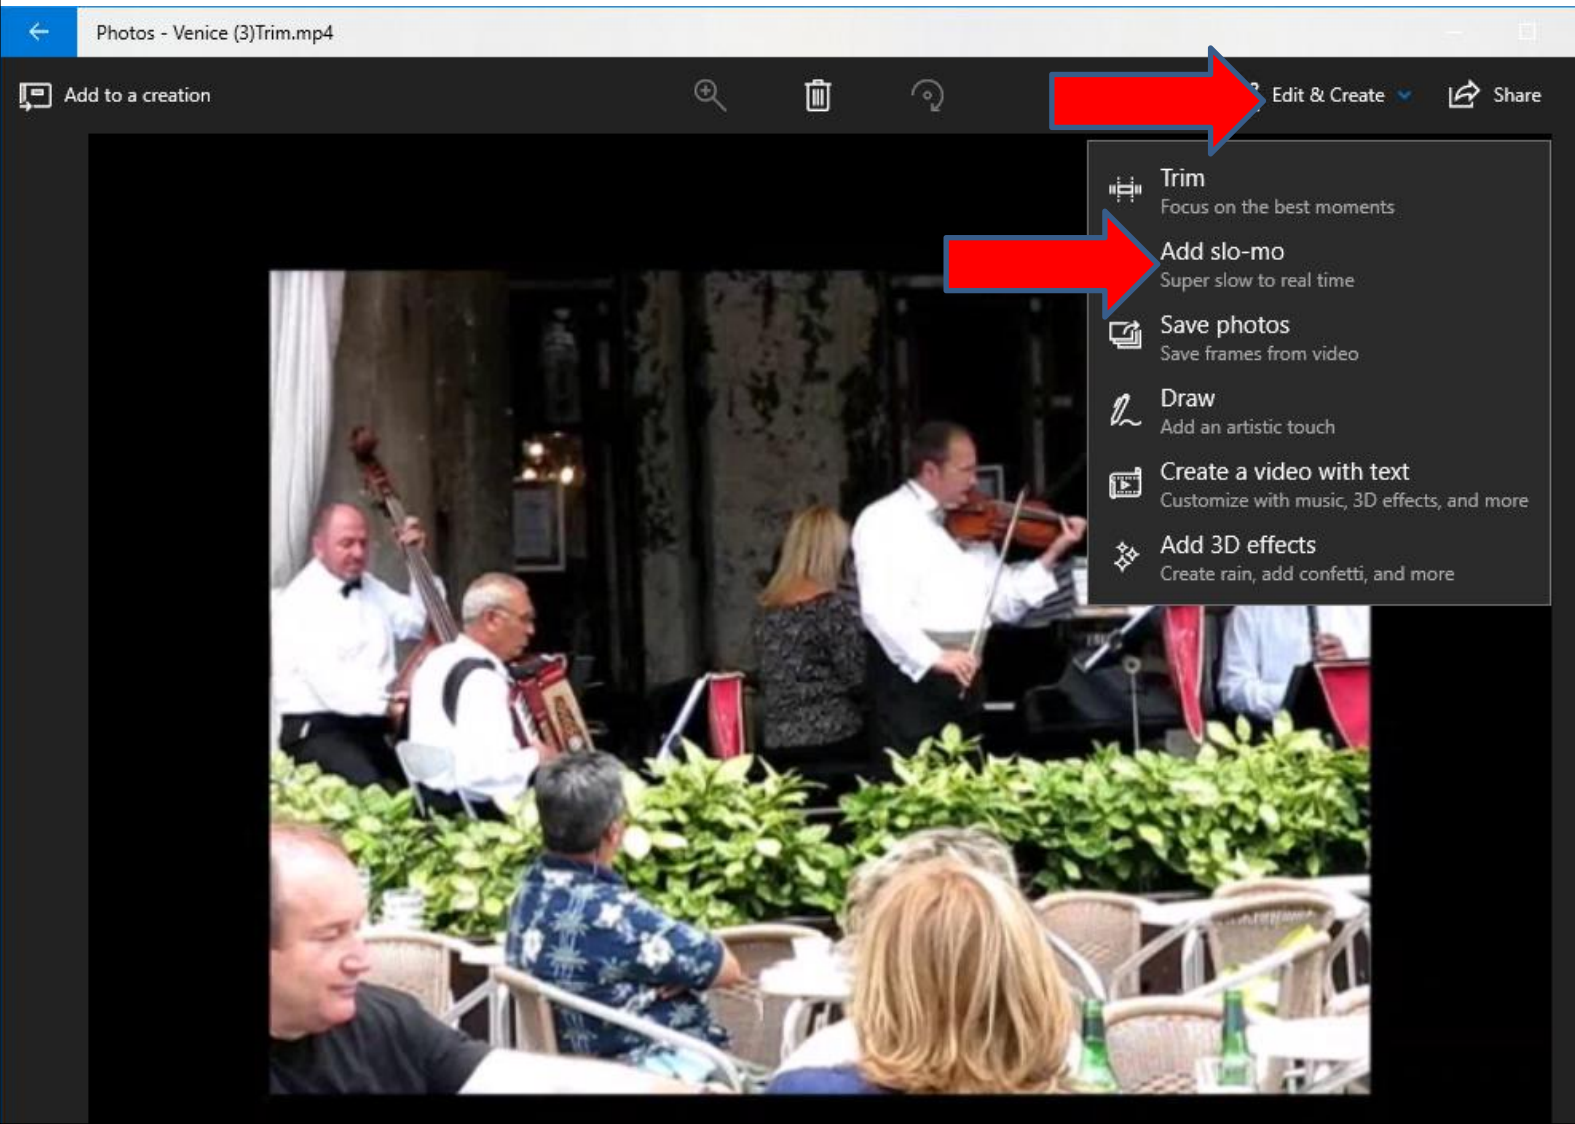

- **When you click on a delete, a new window opens and it shows Delete this? If you want to delete it, click on Delete. If not, click on Cancel. Next is what happens when you click on Delete.**

- **Window closes and it is deleted. You then click on the Copy Video again to edit it again, which is next.**

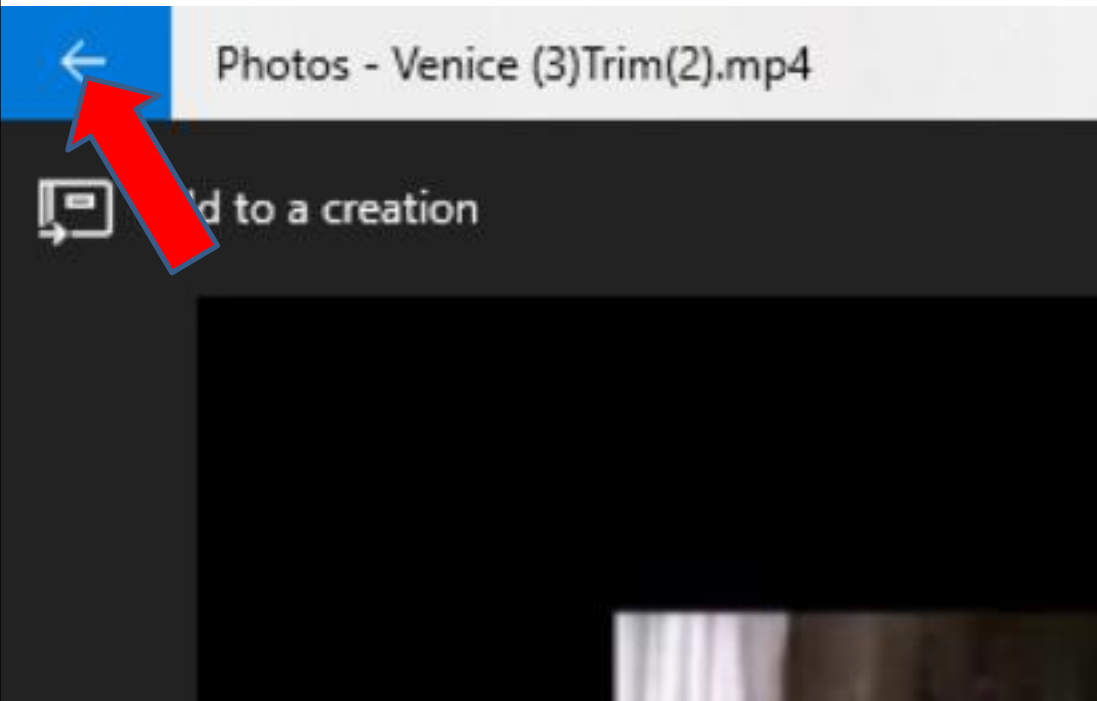

- Page changes again and it starts playing the Video again and click on Edit & Create again and then click on Add slo-mo and next is what happens.

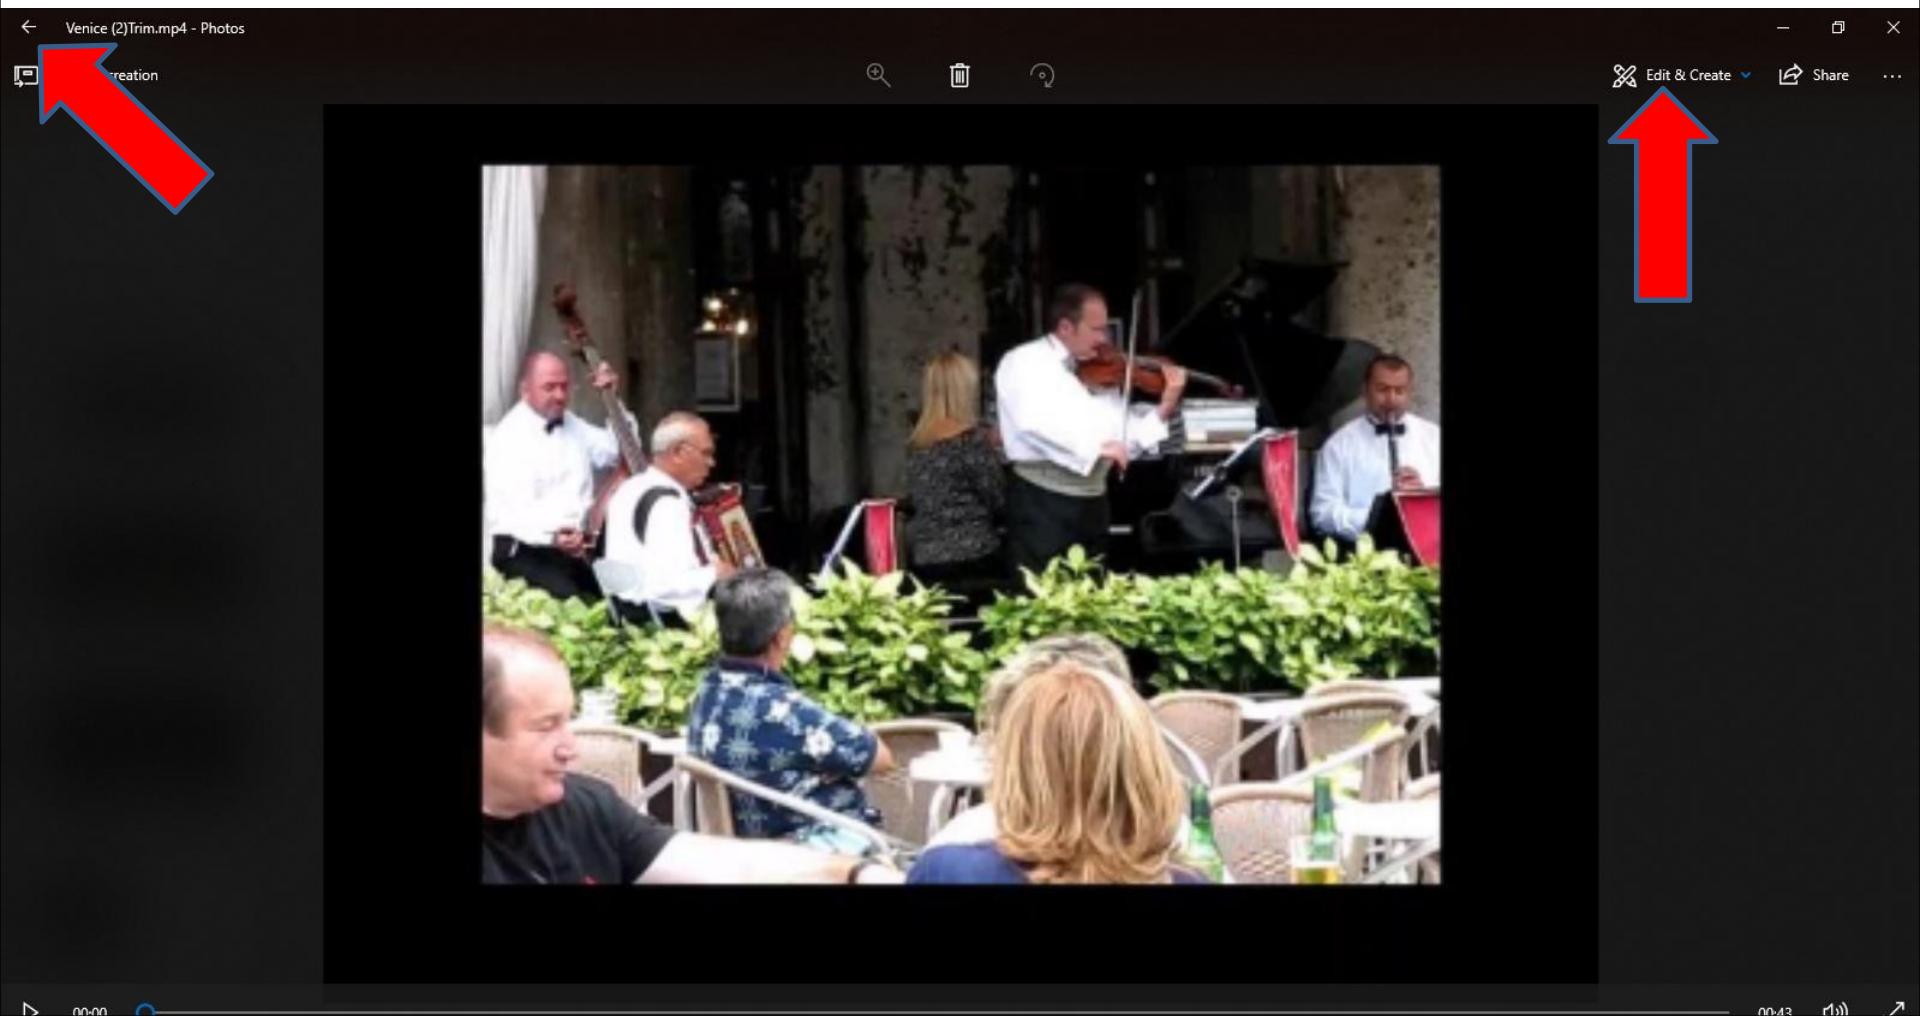

- Page changes and you see Icons at the top of the middle. As I mentioned before, I tried to Slow it and it did not work. If you want another copy of the Video, you can click on Save a copy in the other right. Next explains more.

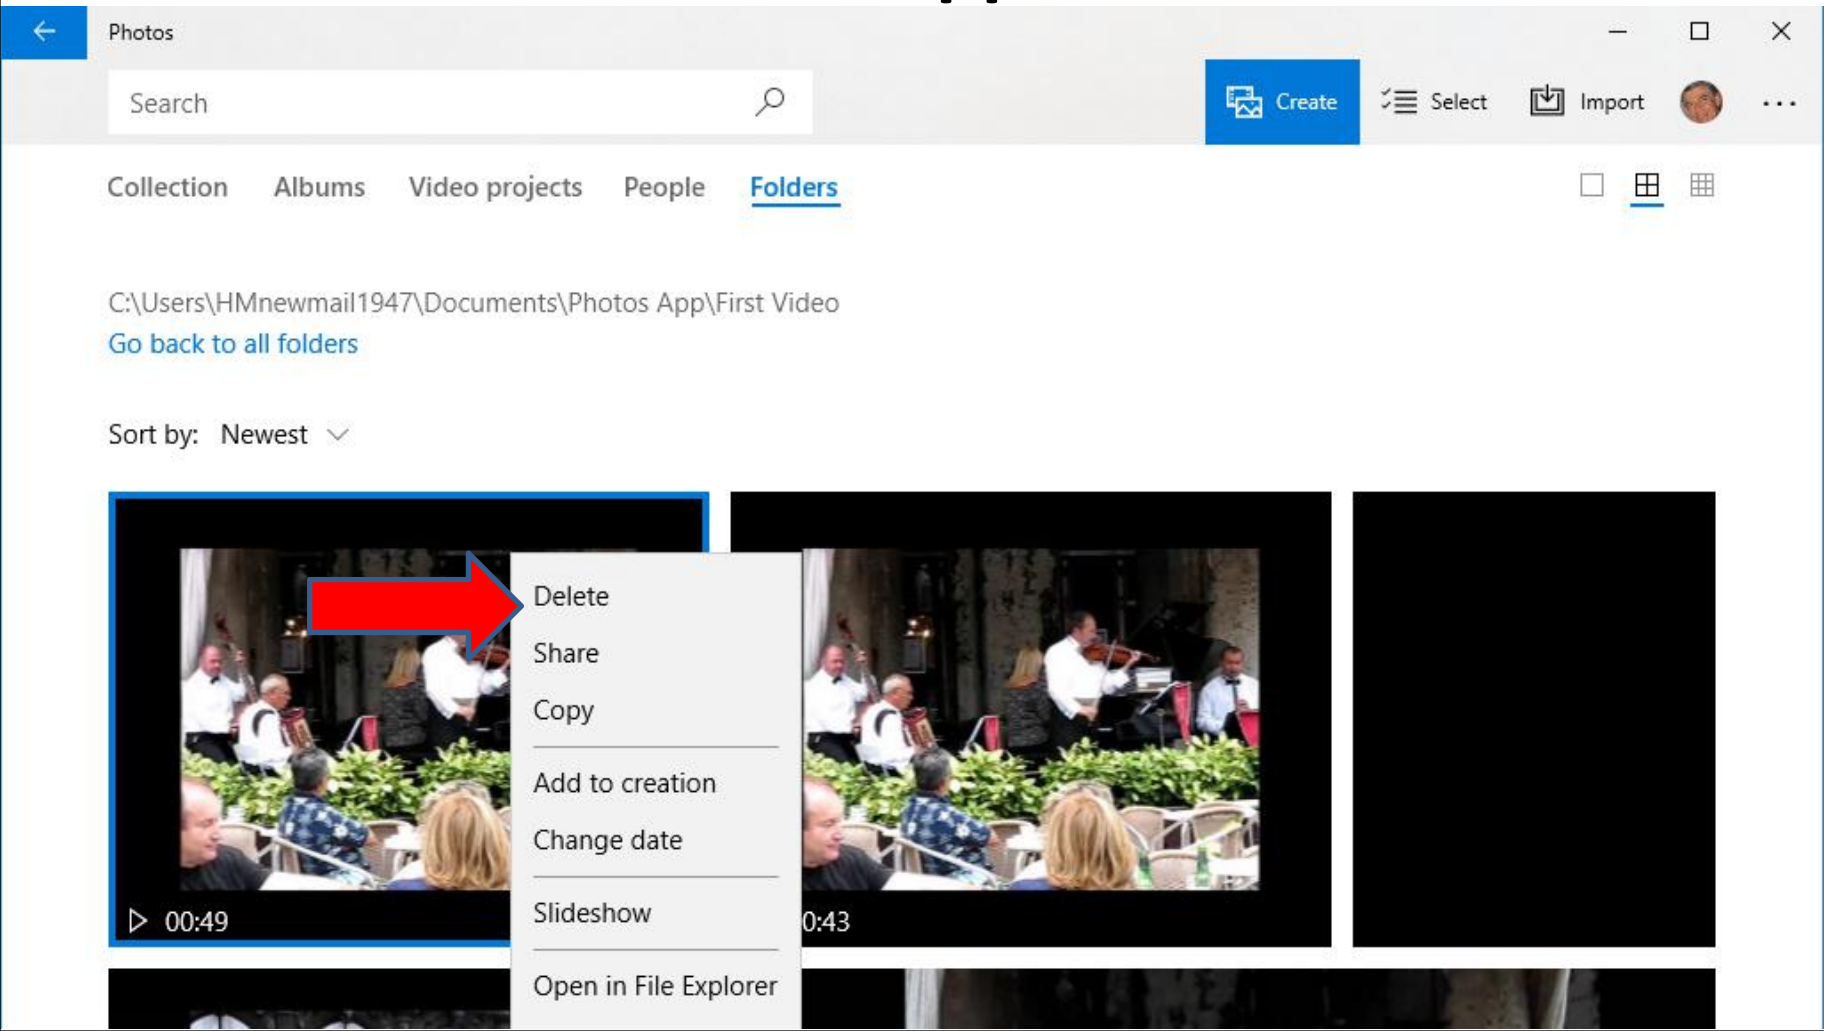

- It is process and once complete the page changes. I clicked on the Icon in the upper left to go back and next is what happens again.

- Page changes and you can Edit & Create again or click on the Icon in the upper left to go to the Folders page. I decided to do that and next is a sample.

- Here is a sample. I decided to right click on the Copy Video again and click on Delete. As I showed you before, a new window opens and you click on Delete. Next is what happens

- You don't see it, because it was deleted. This is the End of Step 7 – Part B.
