

Step 7 – Part B - Straighten

- **Because you are Straighten a photo, you don't need to make a copy.**
- **Like I mentioned in the other Parts, first find a Photo you want to Straighten and double click on it.**
- **Next is a sample of the same photo I showed on Part A in the Edit page.**

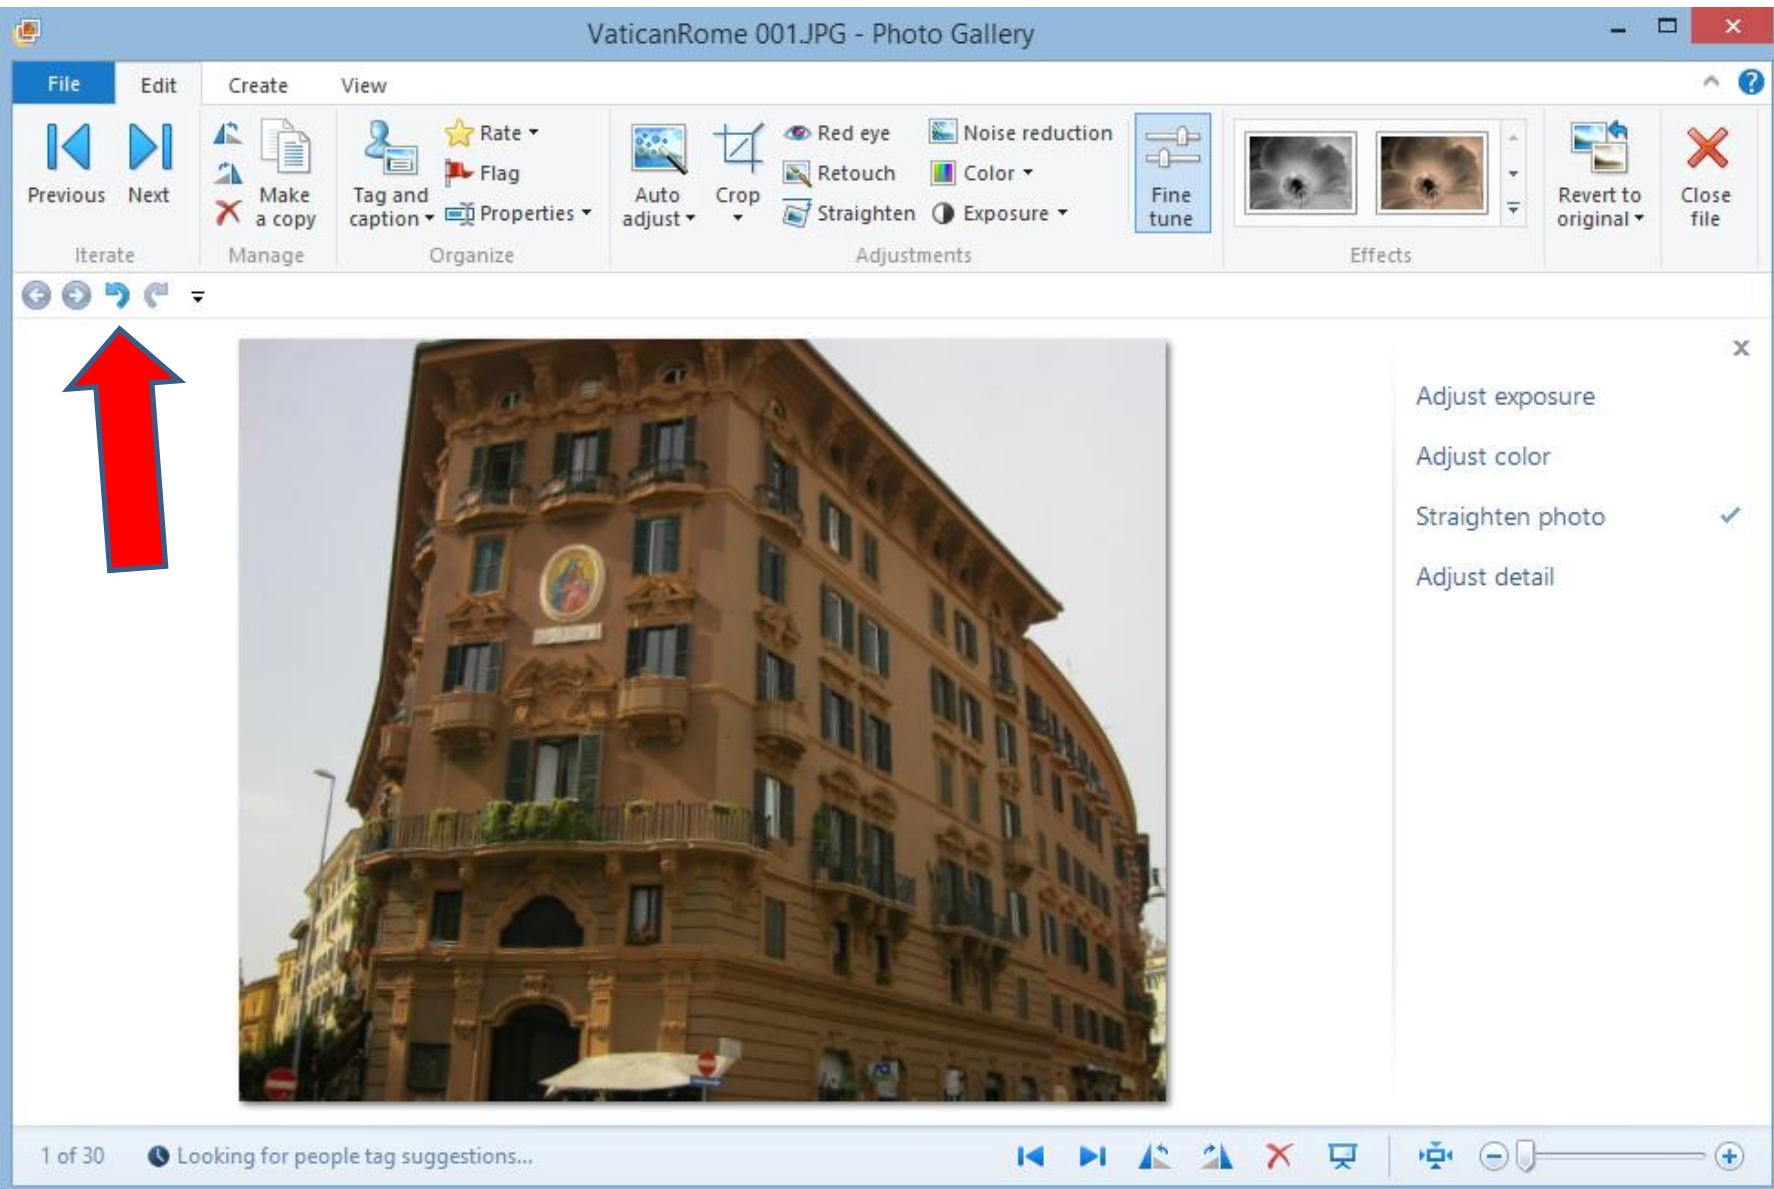

First option is click on Straighten.

The screenshot shows the Windows Photo Gallery application window titled "VaticanRome 001.JPG - Photo Gallery". The interface includes a ribbon with tabs for File, Edit, Create, and View. The Adjustments section is active, showing options like Red eye, Noise reduction, Retouch, Color, Exposure, and Straighten. A red arrow points to the Straighten icon. The main area displays a photograph of a large, ornate building. A context menu is open over the photo, listing options: Adjust exposure, Adjust color, Straighten photo, and Adjust detail. The bottom status bar shows "1 of 30" and "Looking for people tag suggestions...".

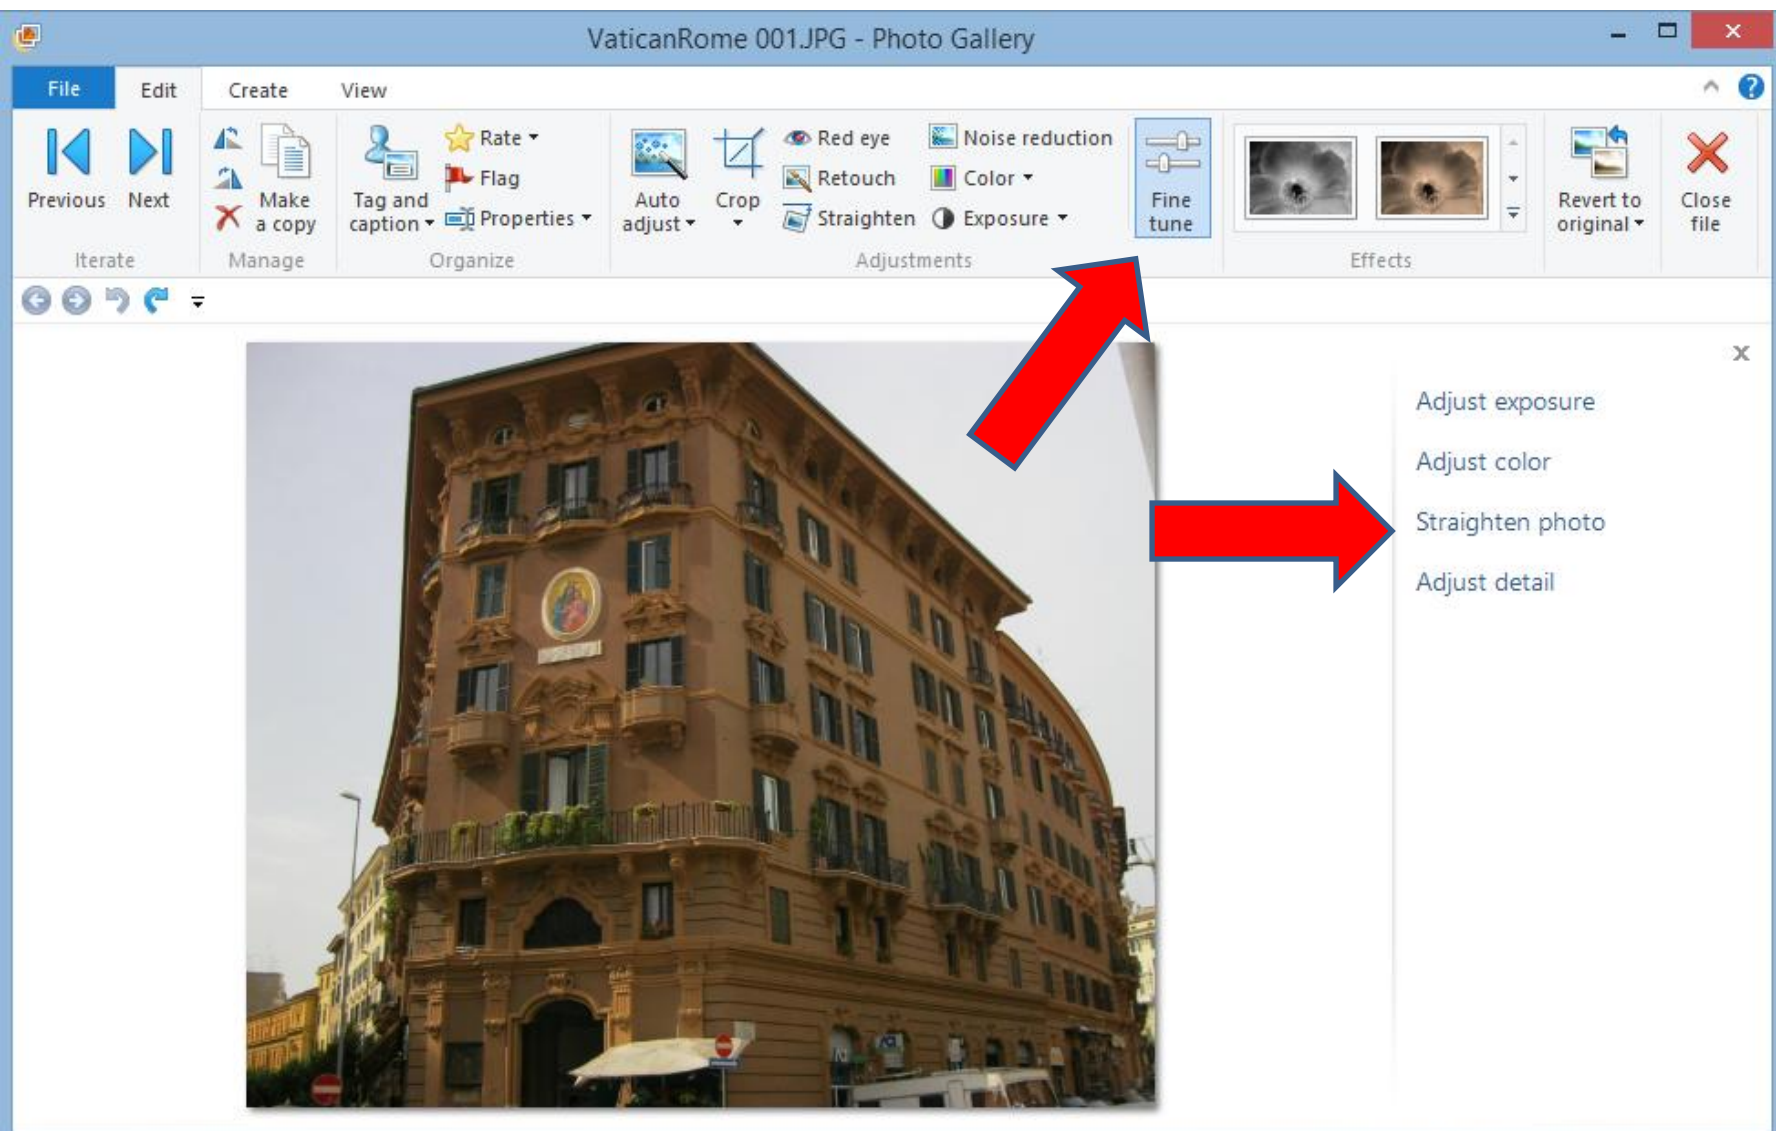

- **Similar to Auto adjust, it automatically Straightens it.**

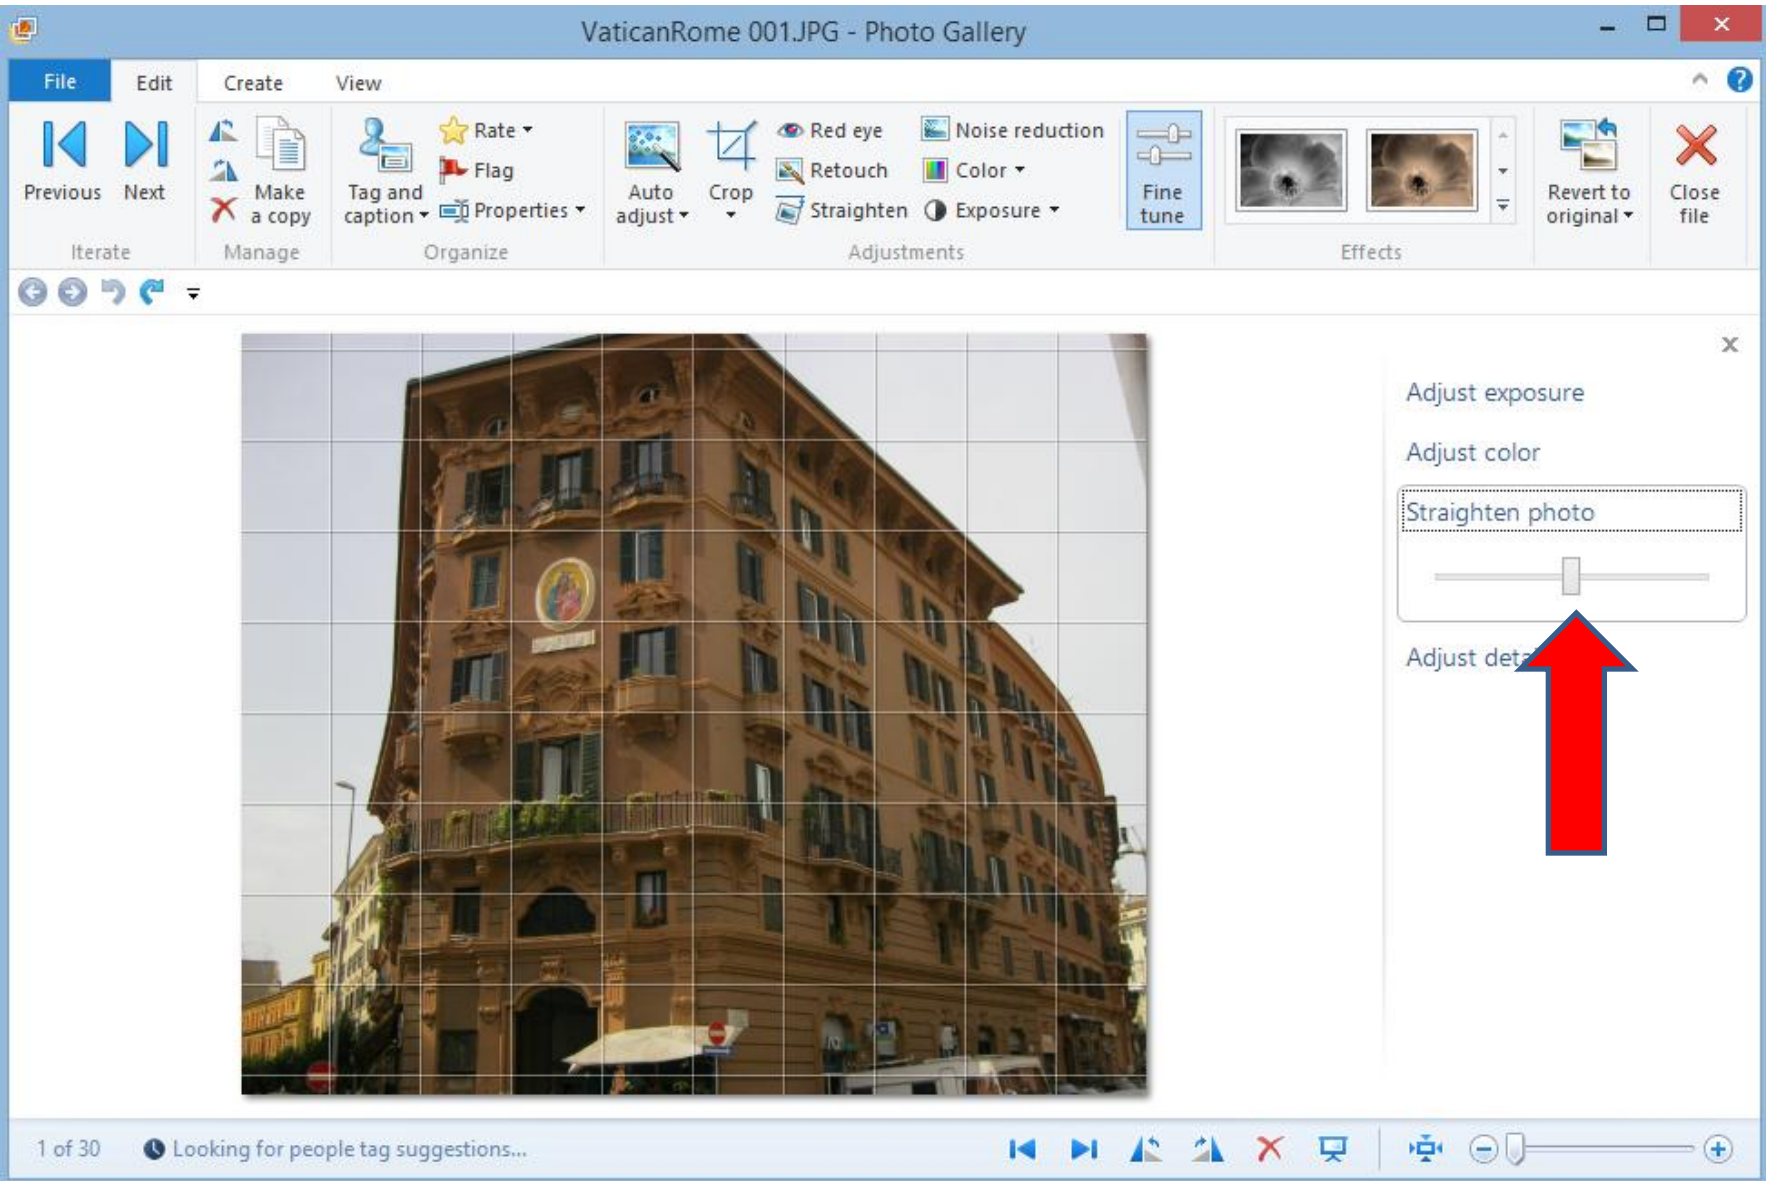

- **Second option is due it manually. Click on Undo first, or close and open another photo.**

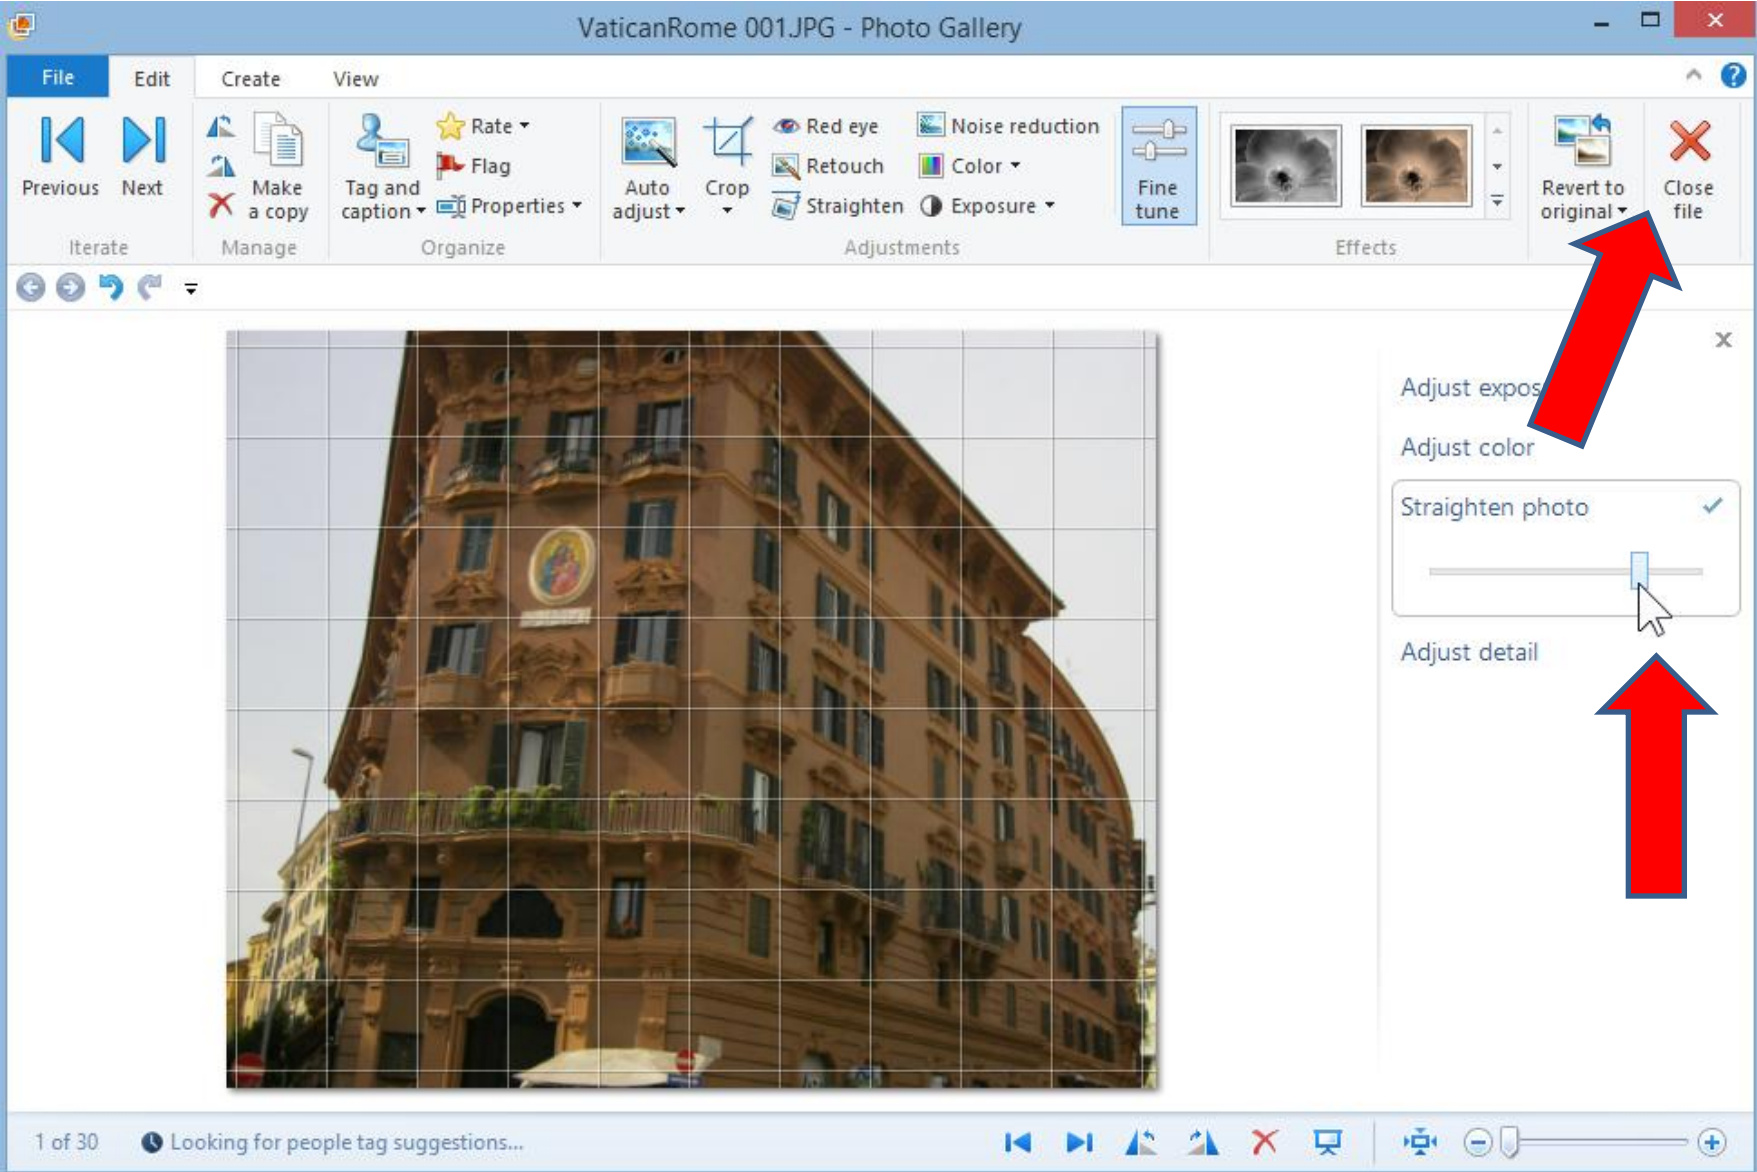

- Once you undo, or add a new photo, click on **Straighten photo** on the right. If it is not there, click on **Fine tune**.

- You then click on the icon, hold it down and drag it to the right (or left depending on the photo)

- You then see the difference. Then click on Close file to save it.

End of Part B.
