

Step 8 – Part C – Noise Reduction.

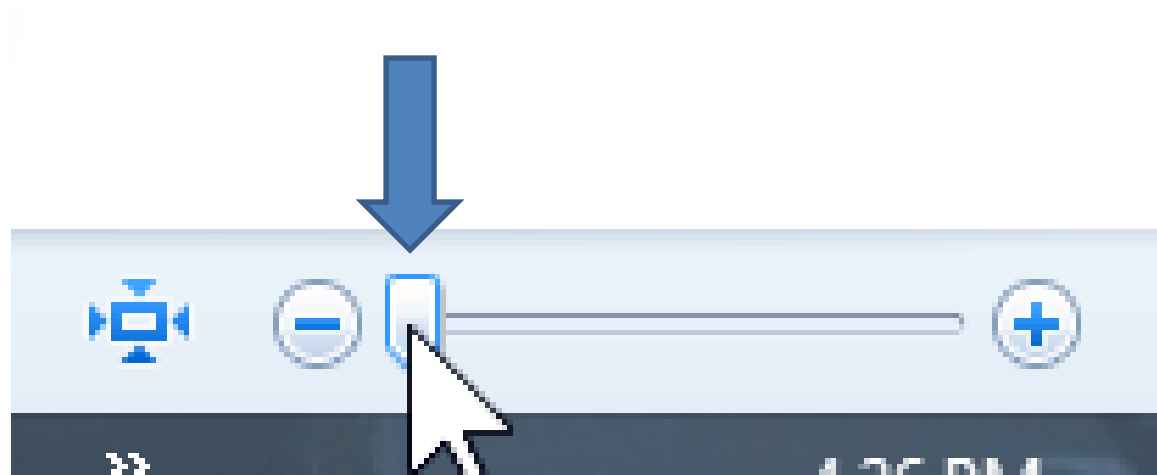

What is Noise Reduction?

- It is not easy to explain. There is a good website page that explains it. Click [HERE](#) to go to that page.

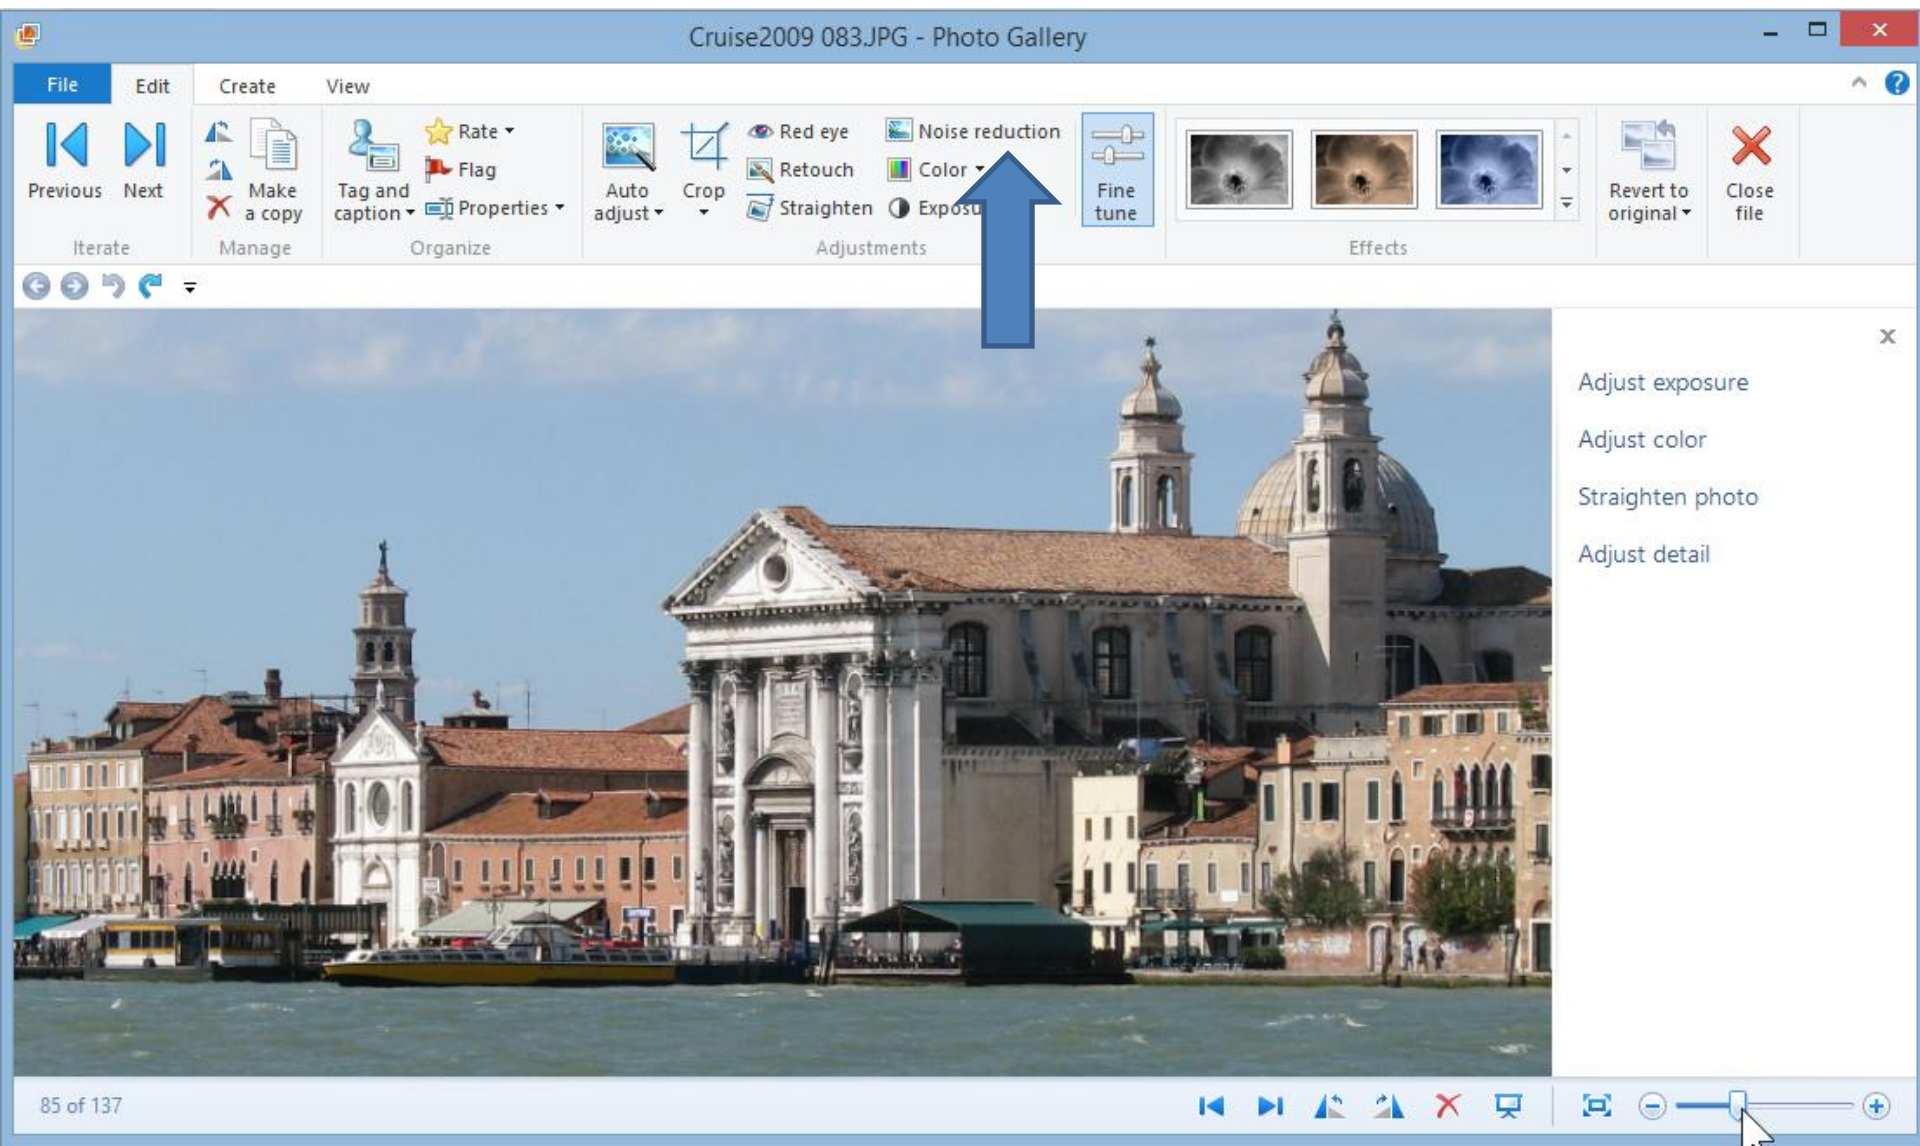

- **First, change the display size. You click on the item in the lower right. Next I will zoom in.**

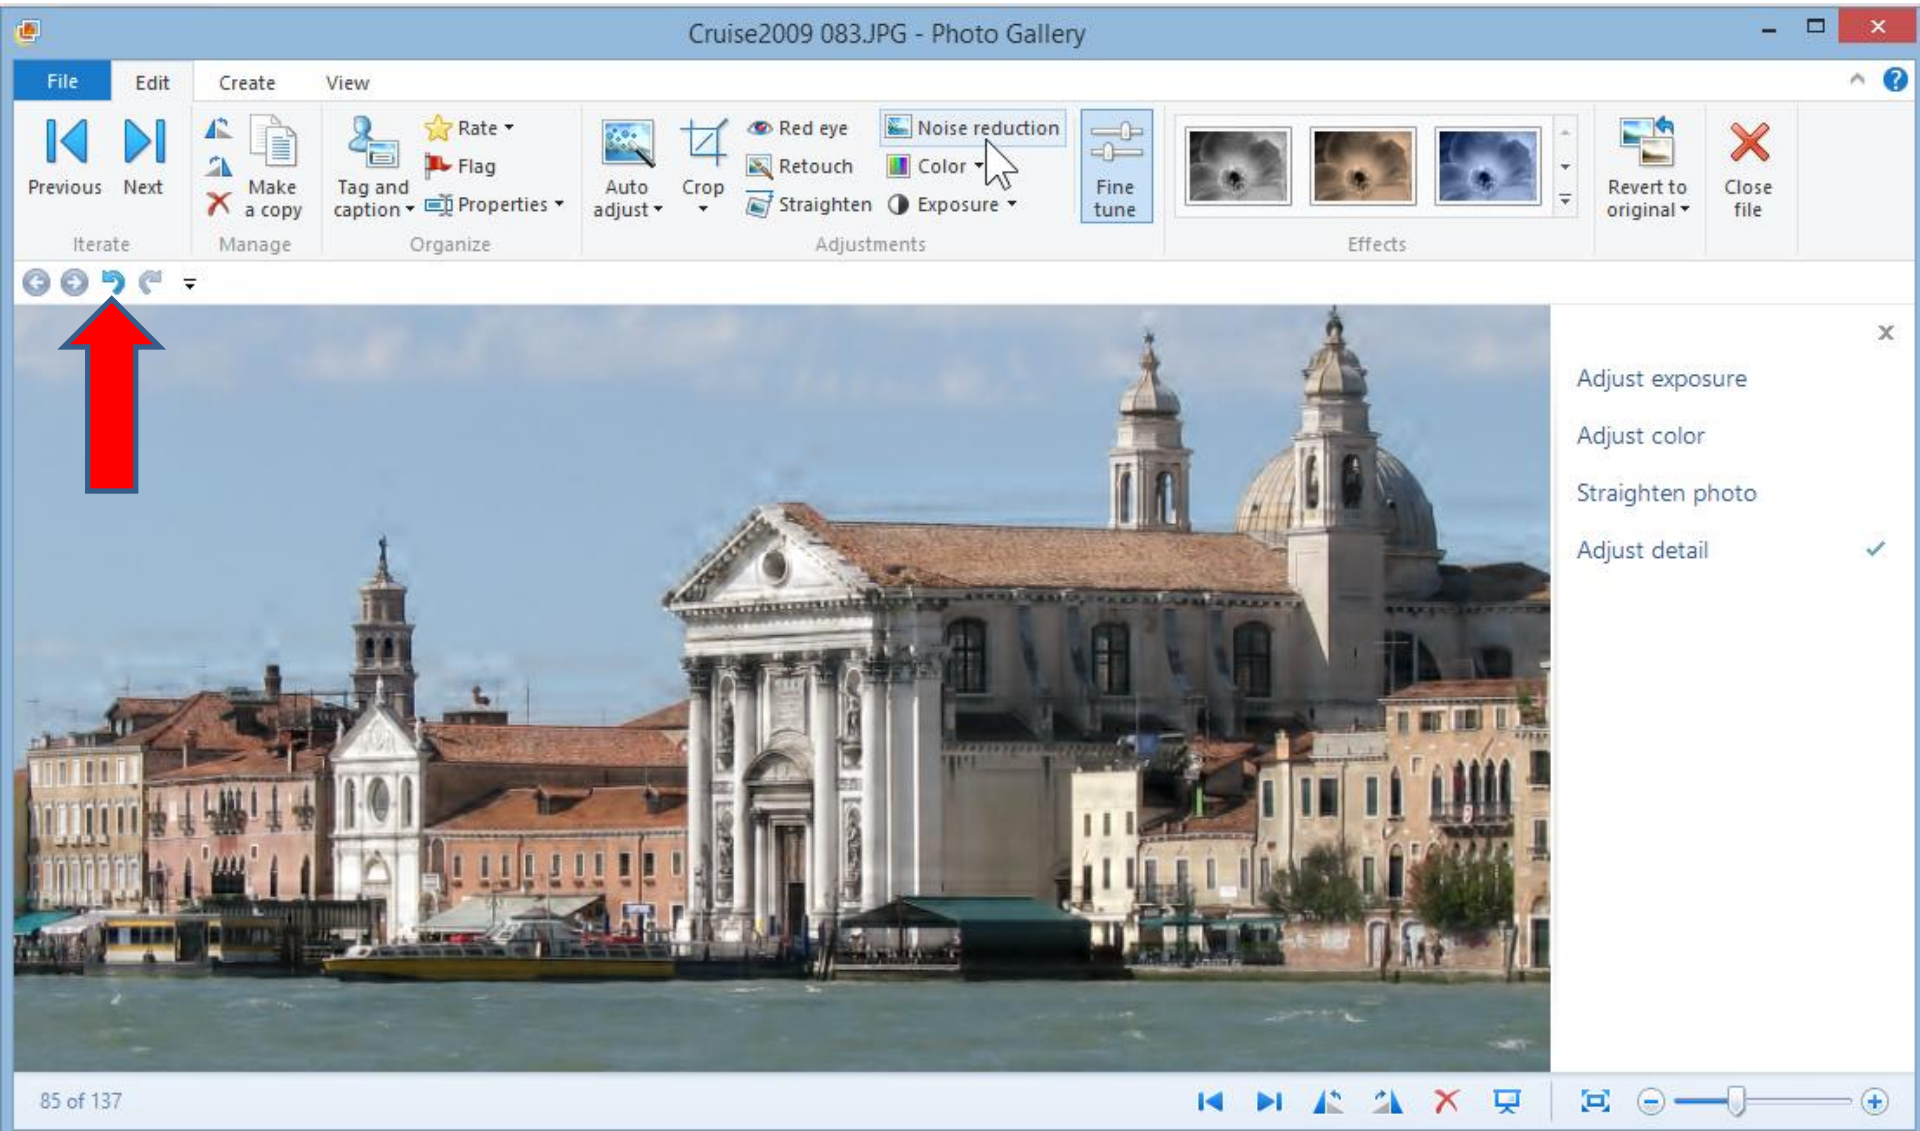

- You left click and hold it down and drag to the right. Next is a sample.

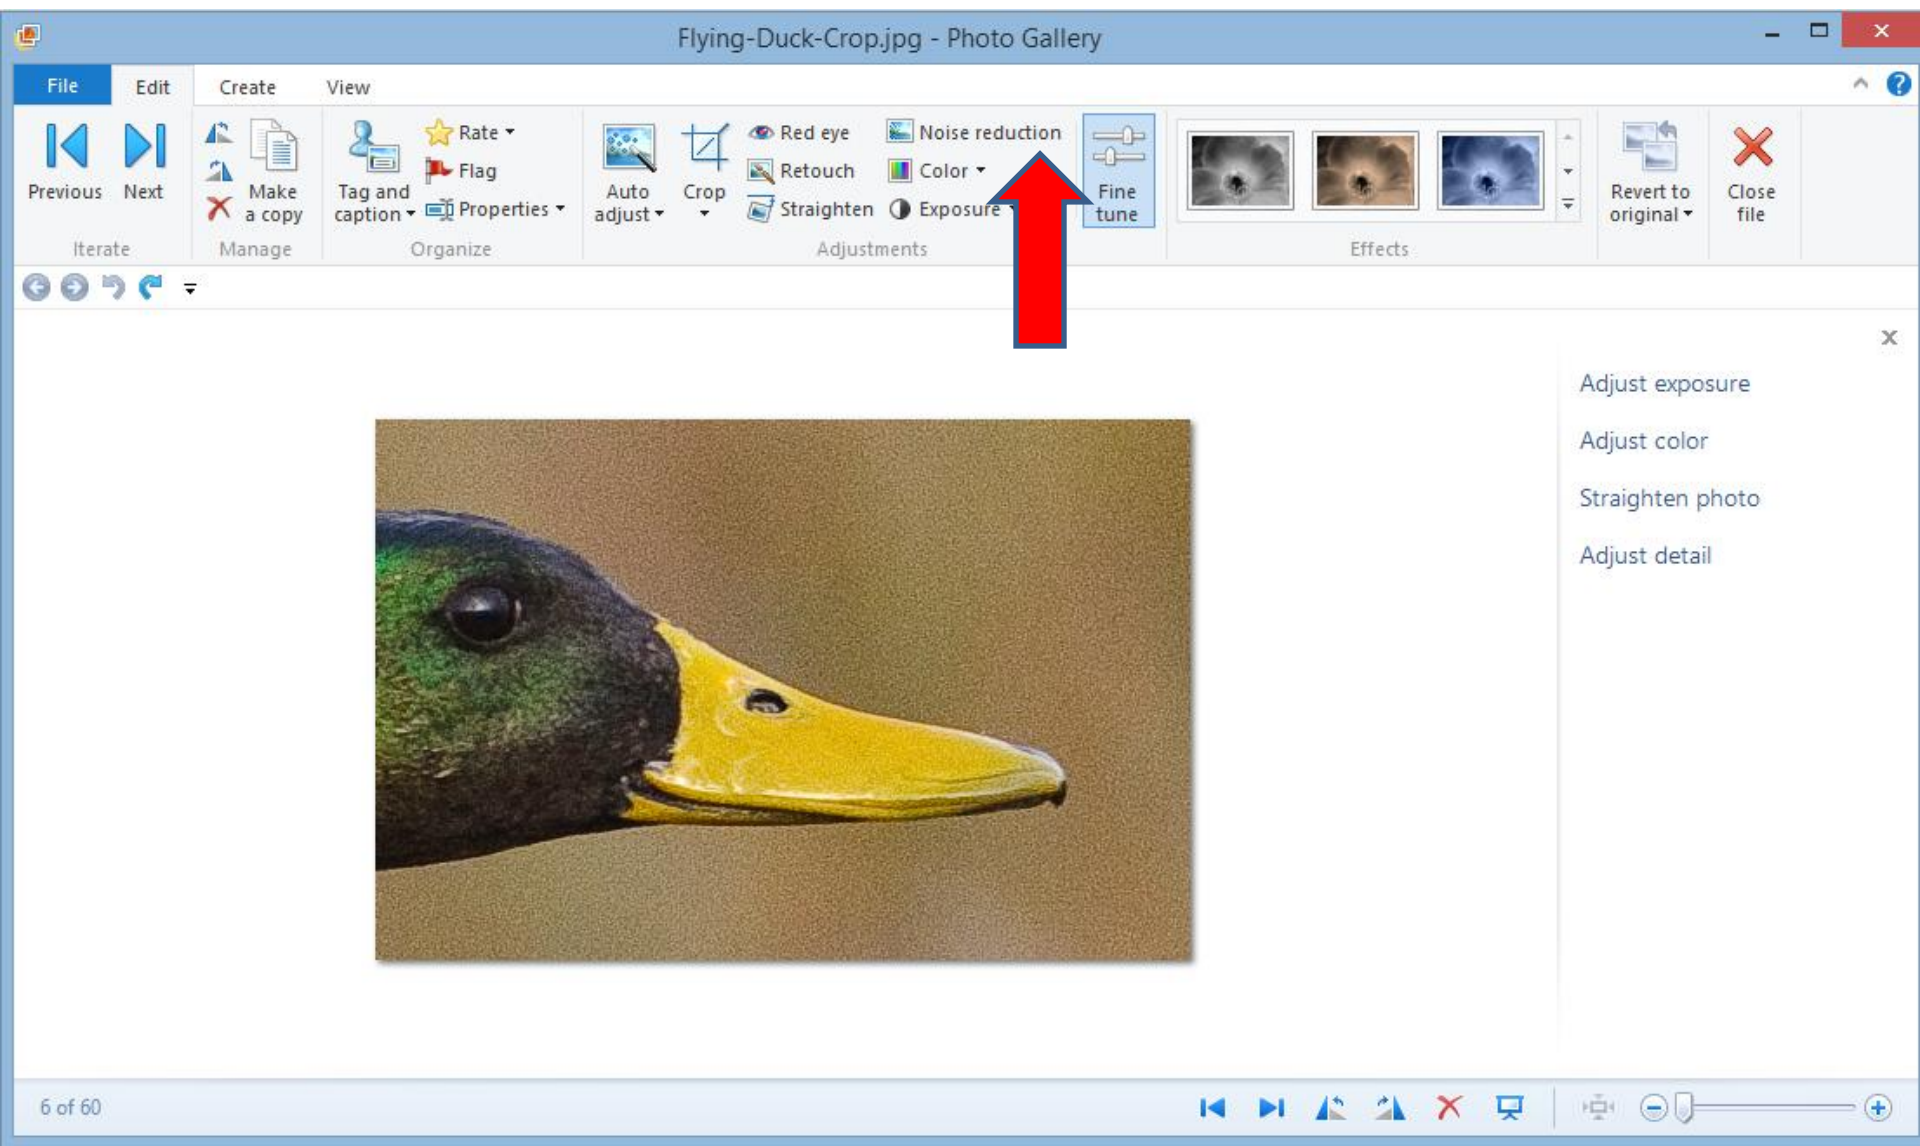

- You then see it larger. Then click on Noise reduction.

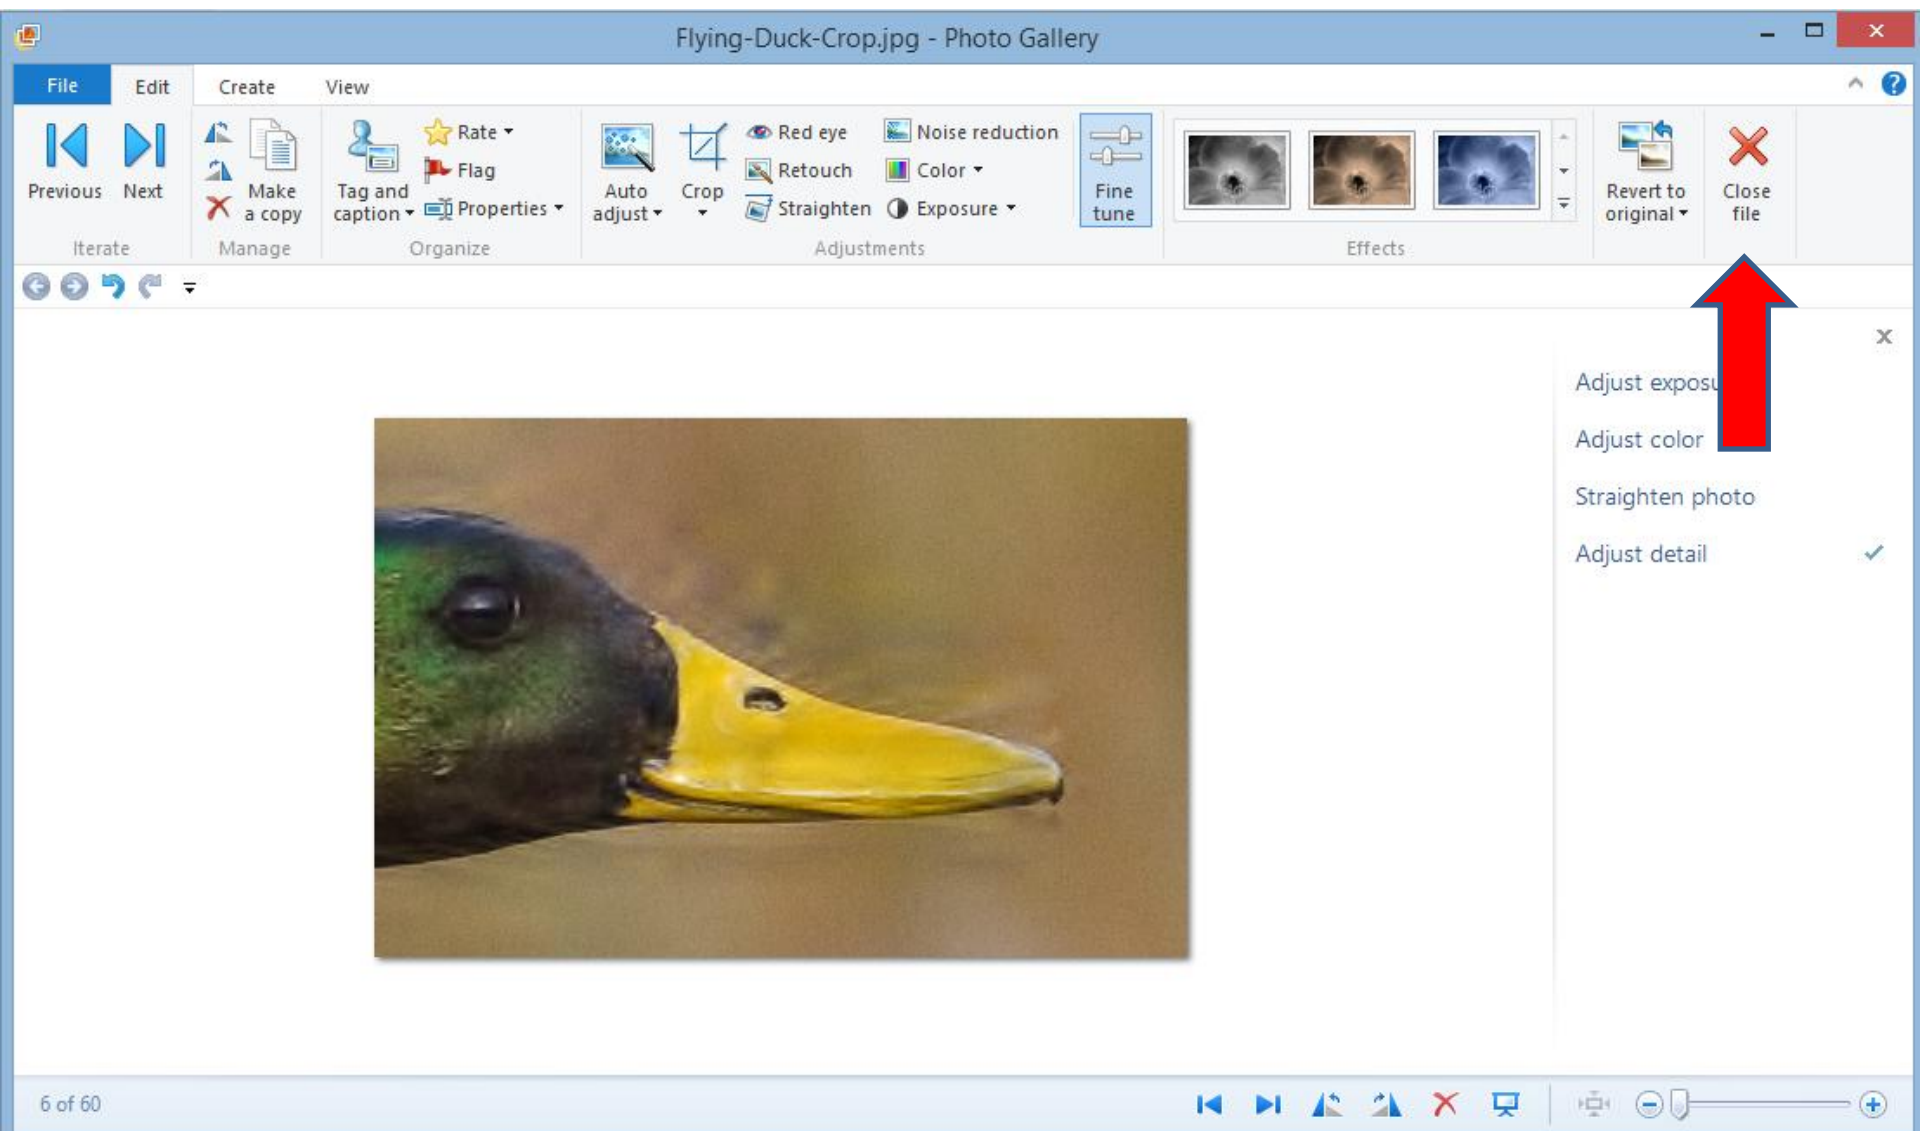

- You see the results and it makes it worse. So you should click on undo. Next is a different one.

- Here is the original. Next is what it looks like when you click on Noise reduction.

- You then see the difference. To save, just click on Close file that I showed you before.

Do Noise Reduction or Not ?

- **It all depends on the Photo. Most likely you don't need to do it.**
- **End of Part C.**
