# Step 8 – Part 3 - How to Manage Passwords – Mozilla Firefox

- If you have not done the Tip How to not save or save user names and passwords, do it first before this Step.
- As I mentioned in the Tip, there is only a few ones you can save a user name and password, like I did for the weather website. But, don't do it on your e-mail, finance, etc. If you have saved user names and passwords, you may want to go to the Manage Passwords and maybe deleted some off them. If you don't think you save user names and passwords, you should go to Manage Passwords to make sure they are not there.
- Next explains about Mozilla Manage Passwords.

- Mozilla Firefox is the only Browser that allows you to view the passwords that you saved, which is not good in case some other person goes to your computer or steals your computer they can view the passwords, except if you set up a Master password, which I recommend. I will show you how to set up Master password later
- Make sure Mozilla is open and next is how to get to Manage Passwords.

 Click on the Icon in the upper right and click on Options as I showed you in other Steps and next is what happens again.

 New page opens again and you see General. Then click on Privacy & Security on the left and next is what happens.

 Page changes to Privacy & Security. You have to click on the line at the right and hold it down and scroll down. Next is a sample of scrolling down.

- Window closes and the Options page closes. I decided to go back to my Home page.
- When you close Mozilla Firefox with the X in the upper right and open it again with the Home pages and the user names and passwords have been removed. Next is what happens.

- I checked a lot of the ones that I removed and you have to log-in.
- As I mentioned before, once you log-in, don't save the password unless you want to take a risk. Some people take the risk to save for e-mail, because it is faster to get to e-mail.
- This is the End of Step 8 Part 3 Mozilla Firefox.
