

Step 10 - Part C - Length of Music & Fix to Music

- If the music on your computer is small, like 30 seconds, you may have to reduce the duration of the photos, or you can copy and paste the music.**
- If music is larger, like 3 minutes, you can add more photos, or increase duration of the photos.**
- Next is a sample of music length.**

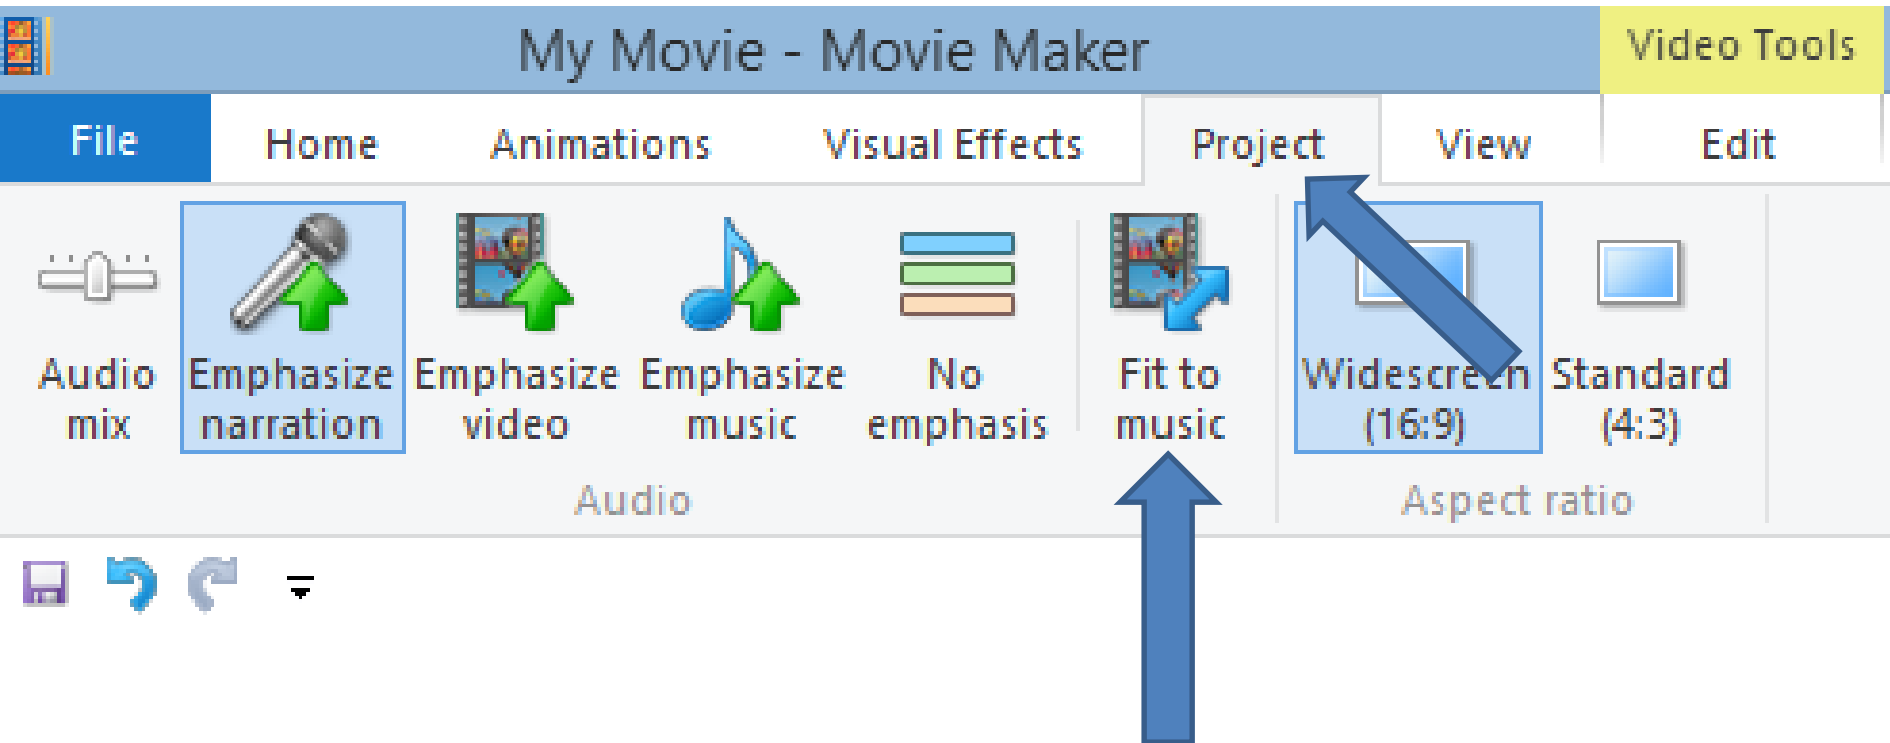

Sample of the music length

- Next, we will fix to music.

The image shows the Microsoft Movie Maker software interface. The title bar reads "My Movie - Movie Maker". The ribbon includes tabs for "Video Tools", "Music Tools", and "Text Tools". The "Home" tab is active, showing options like "Add videos and photos", "Add music", "Webcam video", "Record narration", and "Snapshot". The "Clipboard" section includes "Cut", "Copy", and "Paste". The "Share" section includes icons for OneDrive, Facebook, YouTube, and Twitter. The main workspace shows a video preview window on the left with the word "Wedding" in red text overlaid on a scene of a crowded square in Venice. Below the preview is a timeline with a progress bar showing "00:00.00/00:42.00". The timeline has three tracks: a green track labeled "Venice", a pink track labeled "Wedding", and a purple track labeled "Venice 2009 Bird". A smaller preview window at the bottom right shows a scene from the "Venice" track.

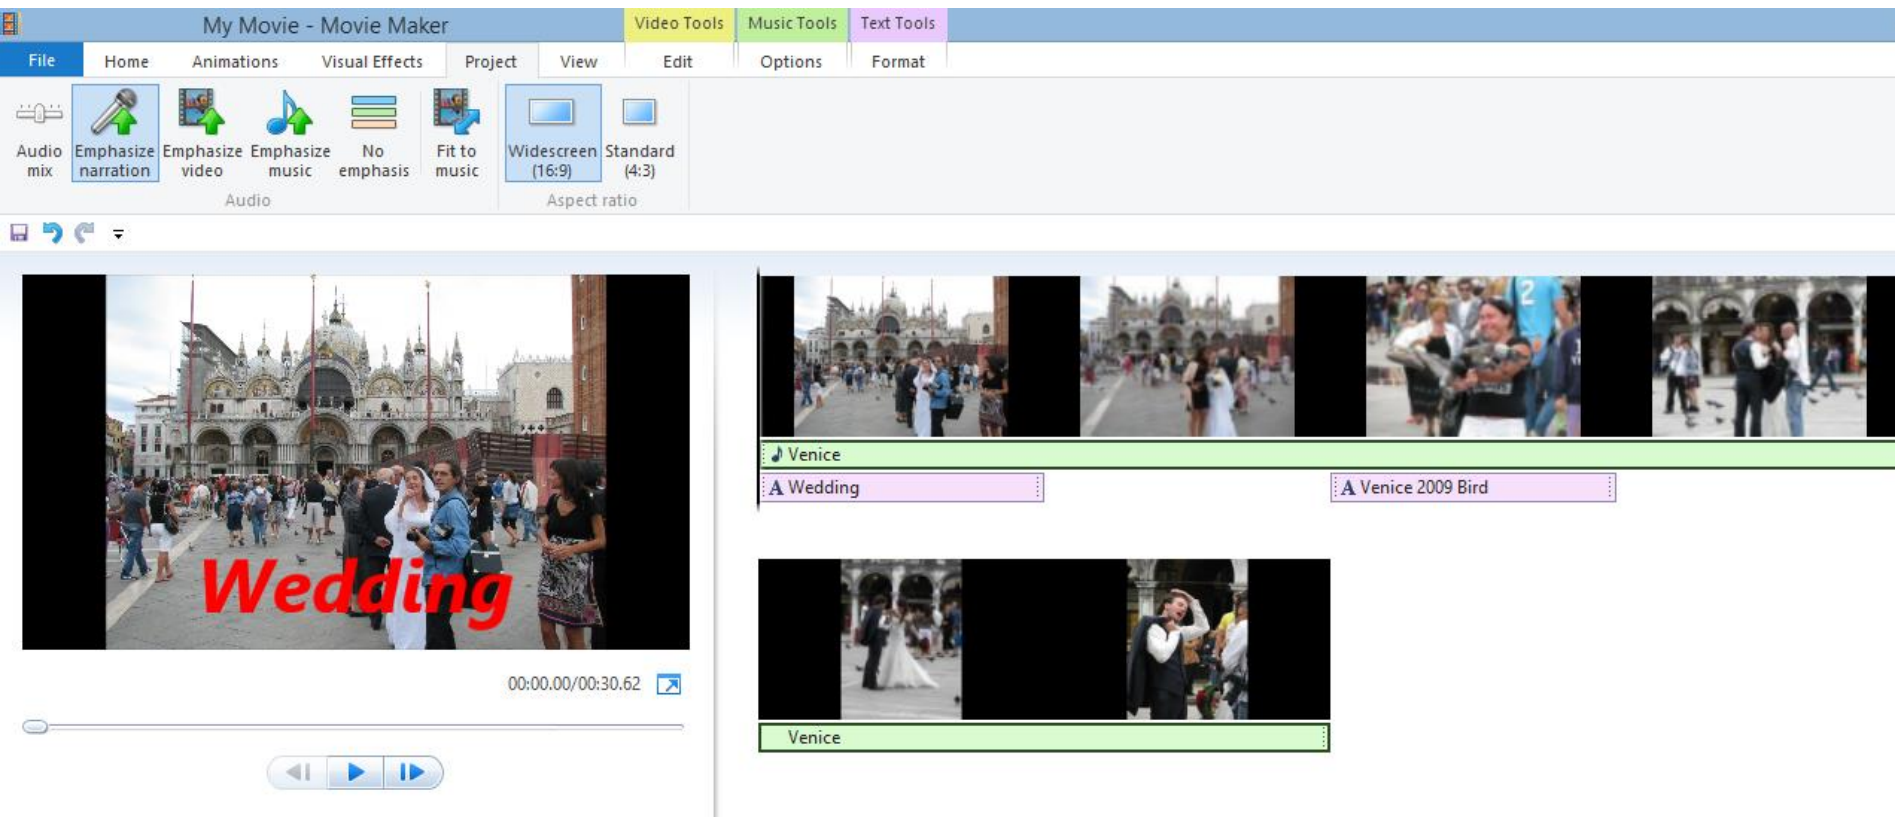

Click on Project Tab

Then click on Fit to music and next is what happens.

You then see it is fixed.

- Next is what happens when it doesn't work.

- Depending on the number of photos and length of the music, you may get this window. Next explains about large Music.

What happens with large Music?

- If the music was about 3 minutes and you had about 6 photos like we just did, it is automatically fixed.
- But the photos duration is about 30 seconds, which is too long.
- So, you may not want to Fix to Music, or add more Photos. Or add Video, which is in the second Class.
- Next is Copy & Paste Music.

Copy & Paste Music

- **It is in Step 11 at the end of Part A.**
- **This is the End of Step 10 – Part C**
