

Part B – Video Effects

- **Video Effects does work on the Title or the first image if you don't add a Title.**

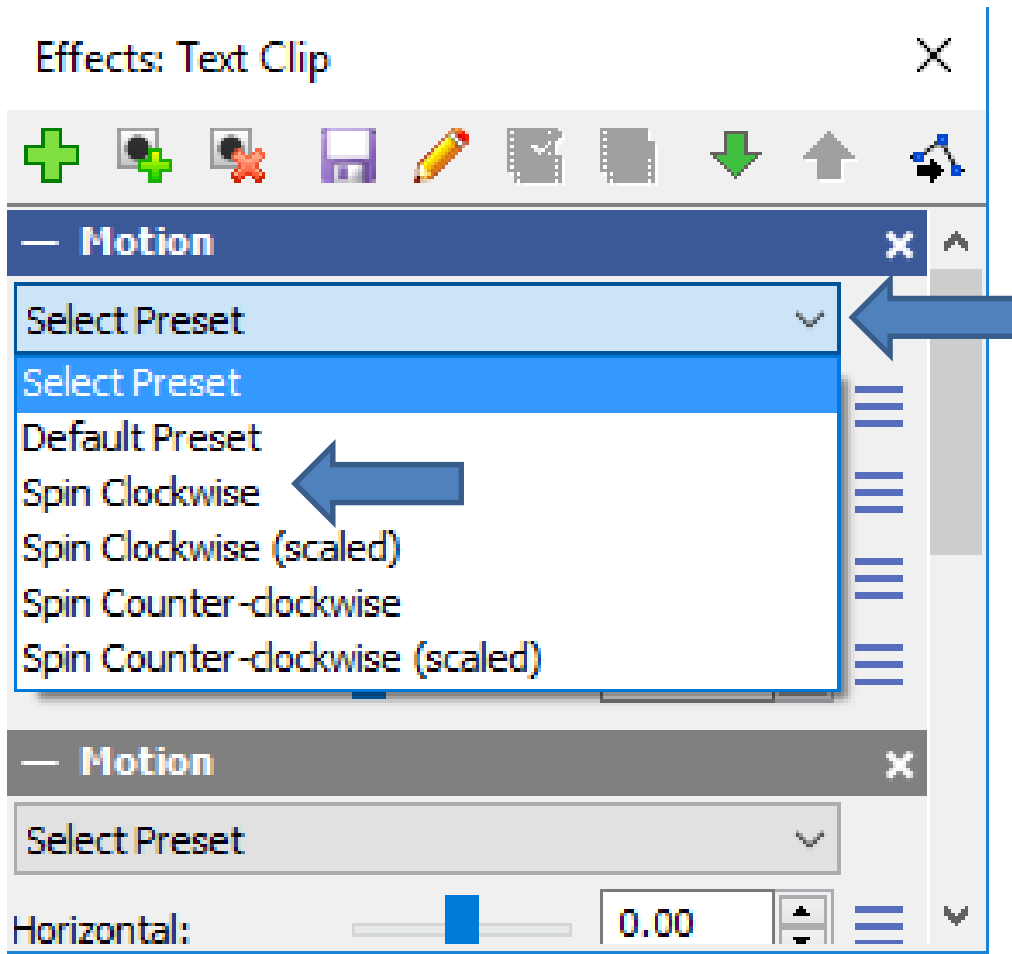

- First click on Title again and then click on Video Effects dropdown and you see a list of options. You hover over them, like in Part A to view them.
- Next is a sample of clicking one, like Motion.

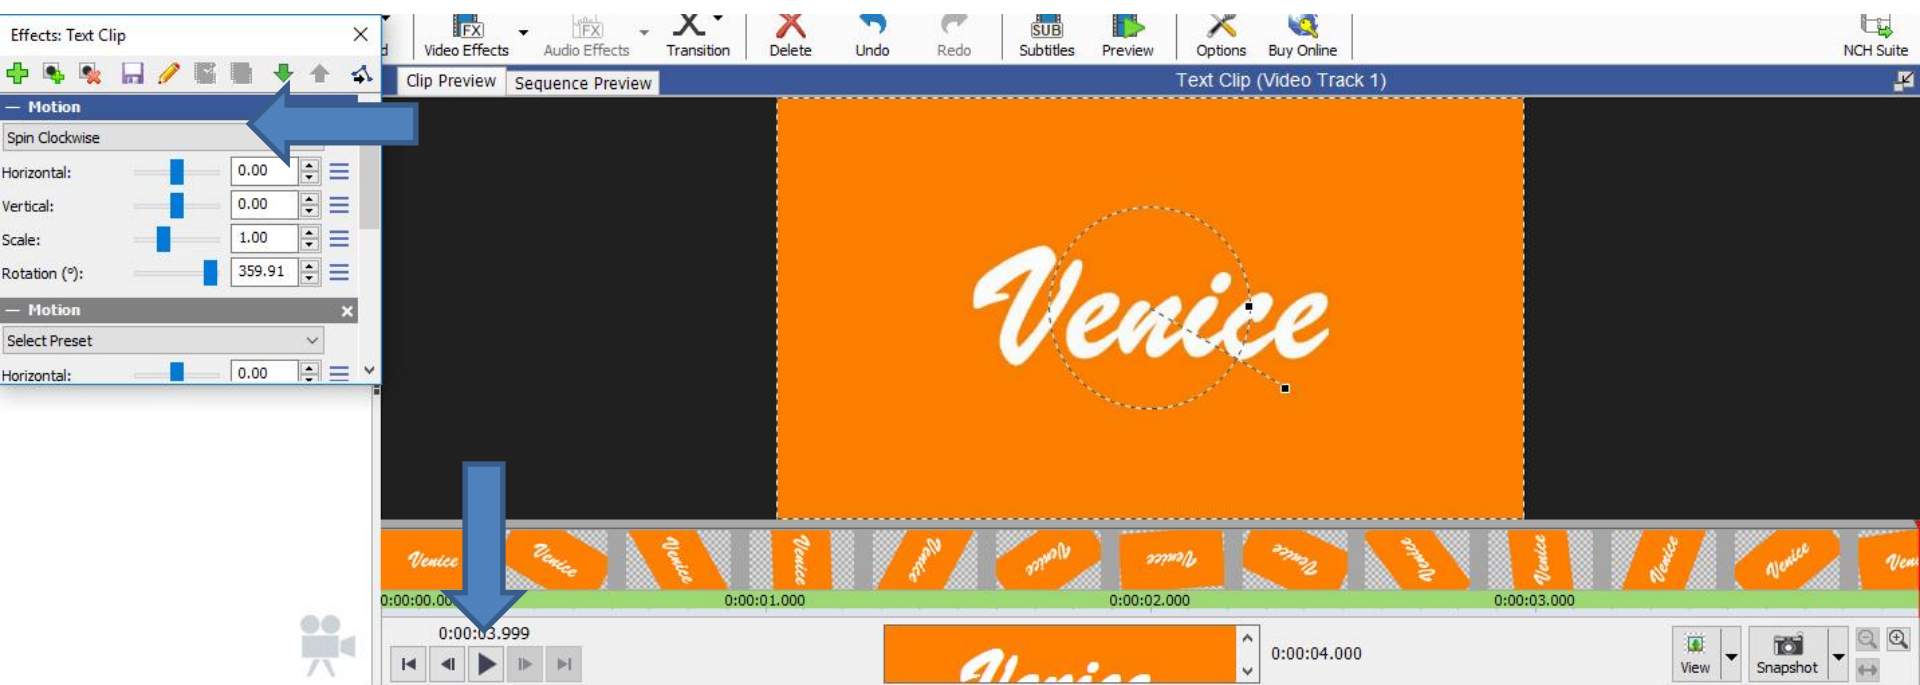

- A new window opens.
- Next I will zoom in and show what to change to show the Moton.

- You click on the drop down next to Select Preset and you see a list and I recommend clicking on Spin Clockwise.
- Next is what happens.

- You then see the effect.
- When you click on play, it shows the effects of the rotation.
- Next is a sample of play.

- When you play, you see the changes. Note – I did Pause so I could take a picture of it.
- When you click on play, it shows the effects of the rotation.
- Next is a what to do when complete.

- **Once complete, click on X to close it.**
- **As I mentioned before you can Undo to remove the effect.**
- **This is the End of Part B.**
