

Part B – Change Volume

- **First I will show you change volume I music we added, because if you add your own song on top of it that we did in Step 6.**

- First click on the music icon  that is above the song you added. Once you click on that, a new window opens to change the Volume or Mute.
- Next is the new window and how to change the Volume.

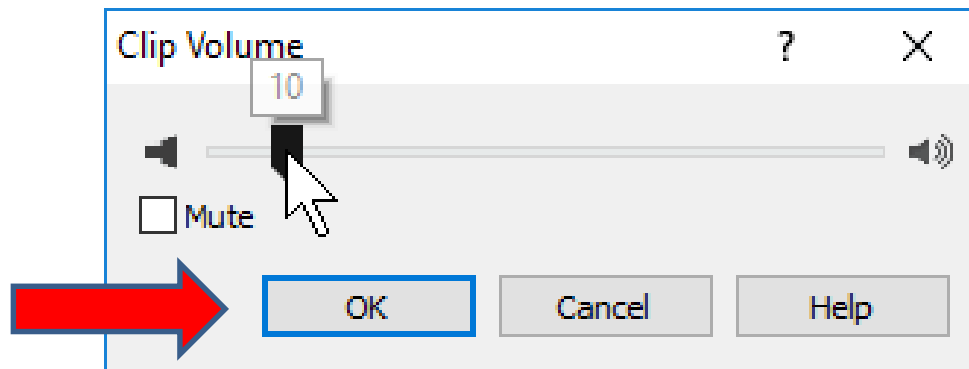

The screenshot displays the VideoPad software interface. The main window shows a video clip of a woman holding a bird. A red arrow points to a speaker icon in the top toolbar. Another red arrow points to the 'Clip Volume' dialog box, which is open over the video. The dialog box contains a volume slider, a 'Mute' checkbox, and 'OK', 'Cancel', and 'Help' buttons. The timeline at the bottom shows the video and audio tracks.

- You left click on this icon and hold it down and drag it to the left to reduce to the volume.

- Here is a sample of dragging to the left and you see volume is 10. Then click on OK. Next is what happens.

- You see the same below, but when you click on Play the music volume goes down and you hear your song better.
- This is the End of Part B.
